EXECUTIVE SUMMARY

This report presents the Conformity Analysis for the 2025 Federal Transportation Improvement Program (2025 FTIP) and the 2022 Regional Transportation Plan Amendment No. 4 (2022 RTP Amendment No. 4). Fresno Council of Governments is the designated Metropolitan Planning Organization (MPO) in Fresno County, California, and is responsible for regional transportation planning.

The Clean Air Act Section 176(c) (42 U.S.C. 7506(c)) and U.S. Environmental Protection Agency (EPA) transportation conformity regulations (40 CFR 93 Subpart A) require that each new RTP and TIP be demonstrated to conform to the State Implementation Plan (SIP) before the RTP and TIP are approved by the MPO or accepted by the U.S. Department of Transportation (DOT). This analysis demonstrates that the criteria specified in the transportation conformity regulations for a conformity determination are satisfied by the 2025 FTIP and the 2022 RTP Amendment No. 4; a finding of conformity is therefore supported. The 2025 FTIP, the 2022 RTP Amendment No. 4, and the corresponding Conformity Analysis were approved by Fresno Council of Governments Policy Board on July 27, 2024. Federal approval is anticipated on or before December 31, 2024. FHWA/FTA last issued a finding of conformity for the 2025 FTIP and the 2022 RTP, as amended if applicable, on December 16, 2022.

The 2025 FTIP and the 2022 RTP Amendment No. 4 have been financially constrained in accordance with the requirements of 40 CFR 93.108 and consistent with the U.S. DOT metropolitan planning regulations (23 CFR Part 450). A discussion of financial constraint and funding sources is included in the appropriate documents.

The applicable Federal criteria or requirements for conformity determinations, the conformity tests applied, the results of the conformity assessment, and an overview of the organization of this report are summarized below.

CONFORMITY REQUIREMENTS

The Federal transportation conformity regulations (40 Code of Federal Regulations Parts 51 and 93) specify criteria and procedures for conformity determinations for transportation plans, programs, and projects and their respective amendments. The Federal transportation conformity regulation was first promulgated in 1993 by the U.S. EPA, following the passage of amendments to the Federal Clean Air Act in 1990. The Federal transportation conformity regulation has been revised several times since its initial release to reflect both EPA rule changes and court opinions. The transportation conformity regulation is summarized in Chapter 1.

The conformity regulation applies nationwide to “all nonattainment and maintenance areas for transportation-related criteria pollutants for which the area is designated nonattainment or has a maintenance plan” (40 CFR 93.102). Currently, the San Joaquin Valley (or portions thereof) is designated as nonattainment with respect to Federal air quality standards for ozone, and particulate

matter under 2.5 microns in diameter (PM_{2.5}); and has a maintenance plan for particulate matter under 10 microns in diameter (PM-10). Therefore, transportation plans and programs for the nonattainment areas for Fresno Council of Governments area must satisfy the requirements of the Federal transportation conformity regulation. Note that the urbanized/metropolitan areas of Kern, Fresno, Stanislaus and San Joaquin Counties have attained the CO standard and maintained attainment for 20 years. In accordance with Section 93.102(b)(4), conformity requirements for the CO standard stop applying 20 years after EPA approves an attainment redesignation request or as of June 1, 2018. Therefore, future conformity analyses for the TIP and RTP no longer include a CO conformity demonstration.

Under the transportation conformity regulation, the principal criteria for a determination of conformity for transportation plans and programs are:

- (1) the TIP and RTP must pass an emissions budget test using a budget that has been found to be adequate by EPA for transportation conformity purposes, or an interim emission test;
- (2) the latest planning assumptions and emission models specified for use in conformity determinations must be employed;
- (3) the TIP and RTP must provide for the timely implementation of transportation control measures (TCMs) specified in the applicable air quality implementation plans; and
- (4) interagency and public consultation.

On-going interagency consultation is conducted through the San Joaquin Valley Interagency Consultation Group to ensure Valley-wide coordination, communication and compliance with Federal and California Clean Air Act requirements. Each of the eight Valley MPOs and the San Joaquin Valley Unified Air Pollution Control District (Air District) are represented. The Federal Highway Administration (FHWA), Federal Transit Administration (FTA), the U.S. EPA, the California Air Resources Board (CARB) and Caltrans are also represented on the committee. The final determination of conformity for the TIP and RTP is the responsibility of FHWA, and FTA within the U.S. DOT.

FHWA has developed a Conformity Checklist (included in Appendix A) that contains the required items to complete a conformity determination. Appropriate references to these items are noted on the checklist.

CONFORMITY TESTS

The conformity tests specified in the Federal transportation conformity regulation are: (1) the emissions budget test, and (2) the interim emission test. For the emissions budget test, predicted emissions for the TIP/RTP must be less than or equal to the motor vehicle emissions budget specified in the approved air quality implementation plan or the emissions budget found to be adequate for transportation conformity purposes. If there is no approved air quality plan for a pollutant for which the region is in nonattainment or no emission budget has been found to be adequate for transportation conformity purposes, the interim emission test applies. Chapter 1 summarizes the applicable air quality implementation plans and conformity tests for ozone, PM-10, and PM_{2.5}.

RESULTS OF THE CONFORMITY ANALYSIS

A regional emissions analysis was conducted for the years 2024, 2025, 2026, 2029, 2031, 2037 and 2046 for each applicable pollutant. All analyses were conducted using the latest planning assumptions and emissions models. The major conclusions of the Conformity Analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 are:

- For 2008 and 2015 8-hour ozone, the total regional on-road vehicle-related emissions (ROG and NOx) associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 all years tested are projected to be less than the approved emissions budgets specified in the *2018 Updates to the California State Implementation Plan for the San Joaquin Valley* (2018 SIP Update). The conformity tests for ozone are therefore satisfied.
- For PM-10, the total regional vehicle-related emissions (PM-10 and NOx) associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 for all years tested are either (1) projected to be less than the approved emissions budgets, or (2) less than the emission budgets using the approved PM-10 and NOx trading mechanism for transportation conformity purposes from the *2007 PM-10 Maintenance Plan (as revised in 2015)*.
- For the 1997 24-hour PM2.5 standard, the total regional on-road vehicle-related emissions associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 for the analysis years are either (1) projected to be less than the approved emission budgets, or (2) less than the emission budgets using the approved PM2.5 and NOx trading mechanism for transportation conformity purposes from the *2018 Plan for the 1997, 2006, and 2012 PM2.5 Standards (2018 PM2.5 Plan)* for the 1997 PM2.5 24-hour serious area requirements (2020 attainment year). The conformity tests for the 1997 24-hour PM2.5 standard are therefore satisfied.
- For the 1997 annual PM2.5 standard, the total regional on-road vehicle-related emissions associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 for the analysis years are projected to be less than the approved emission budgets from the 2021 revision to the *2018 Plan for the 1997, 2006, and 2012 PM2.5 Standards (2018 PM2.5 Plan)* for the 1997 annual PM2.5 serious area requirements (2023 attainment year). The conformity tests for the 1997 annual PM2.5 standard are therefore satisfied.
- For the 2006 24-hour PM2.5 standard, the total regional on-road vehicle-related emissions associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 for the analysis years are either (1) projected to be less than the approved emission budgets, or (2) less than the emission budgets using the approved PM2.5 and NOx trading mechanism for transportation conformity purposes from the *2018 Plan for the 1997, 2006, and 2012 PM2.5 Standards (2018 PM2.5 Plan)*. The conformity tests for the 2006 PM2.5 standard are therefore satisfied.
- For the 2012 annual PM2.5 standard (moderate and serious), the total regional on-road vehicle-related emissions associated with implementation of the 2025 FTIP and the 2022 RTP Amendment No. 4 for the analysis years are either (1) projected to be less than the approved emission budgets, or (2) less than the emission budgets using the approved PM2.5 and NOx trading mechanism for transportation conformity purposes from the *2018 Plan for the 1997,*

2006, and 2012 PM_{2.5} Standards (2018 PM_{2.5} Plan) for 2012 PM_{2.5} moderate area requirements.

The 2025 FTIP and the 2022 RTP Amendment No. 4 will not impede and will support timely implementation of the TCMs that have been adopted as part of applicable air quality implementation plans. The current status of TCM implementation is documented in Chapter 4 of this report. Since the local SJV procedures (e.g., Air District Rule 9120 Transportation Conformity) have not been approved by EPA, consultation has been conducted in accordance with Federal requirements.

REPORT ORGANIZATION

The report is organized into six chapters. Chapter 1 provides an overview of the applicable Federal and State conformity regulations and requirements, air quality implementation plans, and conformity test requirements. Chapter 2 contains a discussion of the latest planning assumptions and transportation modeling. Chapter 3 describes the air quality modeling used to estimate emission factors and mobile source emissions. Chapter 4 contains the documentation required under the Federal transportation conformity regulation for transportation control measures. Chapter 5 provides an overview of the interagency requirements and the general approach to compliance used by the San Joaquin Valley MPOs. The results of the conformity analysis for the TIP/RTP are provided in Chapter 6.

Appendix E includes public hearing documentation conducted on the 2025 FTIP, the 2022 RTP Amendment No. 4, and the corresponding Conformity Analysis on May 15, 2024. Comments received on the conformity analysis and responses made as part of the public involvement process are included in Appendix F.

CHAPTER 1: FEDERAL AND STATE REGULATORY REQUIREMENTS

The criteria for determining conformity of transportation programs and plans under the Federal transportation conformity regulation (40 CFR Parts 51 and 93) and the applicable conformity tests for the San Joaquin Valley nonattainment areas are summarized in this section. The Conformity Analysis for and the 2025 FTIP and 2022 RTP Amendment No. 4 was prepared based on these criteria and tests. Presented first is a review of the development of the applicable conformity regulation and guidance procedures, followed by summaries of conformity regulation requirements, air quality designation status, conformity test requirements, and analysis years for this Conformity Analysis.

Fresno Council of Governments is the designated Metropolitan Planning Organization (MPO) for Fresno County in the San Joaquin Valley. As a result of this designation Fresno Council of Governments prepares the TIP, RTP, and associated conformity analyses. The TIP serves as a detailed four-year (FY 2024/25 – 2027/28) programming document for the preservation, expansion, and management of the transportation system. The 2022 RTP has a 2046 horizon that provides the long-term direction for the continued implementation of the freeway/expressway plan, as well as improvements to arterial streets, transit, and travel demand management programs. The TIP and RTP include capacity enhancements to the freeway/expressway system commensurate with available funding.

A. FEDERAL AND STATE CONFORMITY REGULATIONS

CLEAN AIR ACT AMENDMENTS

Section 176(c) of the Clean Air Act (CAA, 1990) requires that Federal agencies and MPOs not approve any transportation plan, program, or project that does not conform to the approved State Implementation Plan (SIP). The 1990 amendments to the Clean Air Act expanded Section 176(c) to more explicitly define conformity to an implementation plan to mean:

“Conformity to the plan's purpose of eliminating or reducing the severity and number of violations of the national ambient air quality standards and achieving expeditious attainment of such standards; and that such activities will not (i) cause or contribute to any new violation of any standard in any area; (ii) increase the frequency or severity of any existing violation of any standard in any area; or (iii) delay timely attainment of any standard or any required interim emission reductions or other milestones in any area.”

Section 176(c) also provides conditions for the approval of transportation plans, programs, and projects, and requirements that the Environmental Protection Agency (EPA) promulgate conformity determination criteria and procedures no later than November 15, 1991.

FEDERAL RULE

The initial November 15, 1991 deadline for conformity criteria and procedures was partially completed through the issuance of supplemental interim conformity guidance issued on June 7, 1991 for carbon monoxide, ozone, and particulate matter ten microns or less in diameter (PM-10). EPA subsequently promulgated the Conformity Final Rule in the November 24, 1993 *Federal Register* (EPA, 1993). The 1993 Rule became effective on December 27, 1993. The Federal Transportation Conformity Final Rule has been amended several times from 1993 to present. These amendments have addressed a number of items related to conformity lapses, grace periods, and other related issues to streamline the conformity process.

EPA published the Transportation Conformity Rule PM2.5 and PM10 Amendments on March 24, 2010; the rule became effective on April 23, 2010 (EPA, 2010a). This PM amendments final rule amends the conformity regulation to address the 2006 PM2.5 national ambient air quality standard (NAAQS). The final PM amendments rule also addresses hot-spot analyses in PM2.5 and PM10 and carbon monoxide nonattainment and maintenance areas.

On March 14, 2012, EPA published the *Transportation Conformity Rule Restructuring Amendments*, effective April 13, 2012 (EPA, 2012a). The amendments restructure several sections of the rule so that they apply to any new or revised NAAQS. In addition, several clarifications to improve implementation of the rule were finalized.

On March 6, 2015, EPA published *Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements* final rule (effective April 6, 2015), which shifted the San Joaquin Valley 2008 Ozone Standard attainment date from December 31, 2032 to July 20, 2032 (EPA, 2015). EPA's March 2015 ozone implementation rule also revoked the 1997 Ozone Standard for transportation conformity purposes. On February 16, 2018, the U.S. Court of Appeals ruled against parts of the EPA's 2015 Ozone Implementation Rule related to the revocation of the 1997 ozone standard and the relevant "anti-backsliding" requirements. However, according to *Transportation Conformity Guidance for the South Coast II Court Decision*, nonattainment areas with existing 2008 ozone conformity budgets are not required to address the 1997 ozone standards for conformity purposes.

On December 6, 2018, EPA published the *Implementation of the 2015 National Ambient Air Quality Standards for Ozone: Nonattainment Area State Implementation Plan Requirements* final rule, effective February 4, 2019 (EPA, 2018). The rule clarified that nonattainment areas must continue to demonstrate conformity to the 2008 ozone standards.

On August 24, 2016, EPA published its Final Rule titled *Implementing National Ambient Air Quality Standards for Fine Particles: State Implementation Plan Requirements*. According to the implementation rule, areas designated as nonattainment for the 1997 PM2.5 standards, must continue to demonstrate conformity to these standards until attainment (EPA, 2016).

MULTI-JURISDICTIONAL GUIDANCE

EPA reissued Guidance for Transportation Conformity Implementation in Multi-Jurisdictional Nonattainment and Maintenance Areas in July 2012 (EPA, 2012c). This guidance updates and supersedes the July 2004 “multi-jurisdictional” guidance (EPA, 2004a), but does not change the substance of the guidance on how nonattainment areas with multiple agencies should conduct conformity determinations. This guidance applies to the San Joaquin Valley since there are multiple MPOs within a single nonattainment area. The main principle of the guidance is that one regional emissions analysis is required for the entire nonattainment area. However, separate modeling and conformity documents may be developed by each MPO. The Transportation Conformity Guidance for 2015 Ozone NAAQS Nonattainment Areas released in June 2018 incorporates the 2012 Multi-Jurisdictional Guidance by reference.

Part 3 of the guidance applies to nonattainment areas that have adequate or approved conformity budgets addressing a particular air quality standard. This Part currently applies to the San Joaquin Valley for ozone and PM-10. The guidance allows MPOs to make independent conformity determinations for their plans and TIPs as long as all of the other subareas in the nonattainment area have conforming transportation plans and TIPs in place at the time of each MPO and the Department of Transportation (DOT) conformity determination.

With respect to PM2.5, the Transportation Conformity Rule – PM2.5 and PM10 Amendments published on March 24, 2010 effectively incorporates the “multi-jurisdictional” guidance directly into the rule. The Rule allows MPOs to make independent conformity determinations for their plans and TIPs if all of the other subareas in the nonattainment area have conforming transportation plans and TIPs in place at the time of each MPO and DOT conformity determination.

DISTRICT RULE

The San Joaquin Valley Unified Air Pollution Control District (Air District) adopted Rule 9120 Transportation Conformity on January 19, 1995 in response to requirements in Section 176(c)(4)(c) of the 1990 Clean Air Act Amendments. In May 2015, the San Joaquin Valley Unified Air Pollution Control District requested ARB to withdraw Rule 9120 from California State Implementation Plan consideration.

In July of 2015, ARB sent a letter to EPA withdrawing Rule 9120 from the California State Implementation Plan. Therefore, EPA can no longer act on the Rule. It should also be noted that EPA has changed 40 CFR 51.390 to streamline the requirements for State conformity SIPs. Since a transportation conformity SIP cannot be approved for the San Joaquin Valley, the Federal transportation conformity rule governs.

B. CONFORMITY REGULATION REQUIREMENTS

The Federal regulations identify general criteria and procedures that apply to all transportation conformity determinations, regardless of pollutant and implementation plan status. These include:

- 1) *Conformity Tests* — Sections 93.118 and 93.119 specify emissions tests (budget and interim emissions) that the TIP/RTP must satisfy in order for a determination of conformity to be found. The final transportation conformity regulation issued on July 1, 2004 requires a submitted SIP

motor vehicle emissions budget to be found adequate or approved by EPA prior to use for making conformity determinations. The budget must be used on or after the effective date of EPA's adequacy finding or approval.

2) *Methods / Modeling:*

Latest Planning Assumptions — Section 93.110 specifies that conformity determinations must be based upon the most recent planning assumptions in force at the time the conformity analysis begins. This is defined as “the point at which the MPO begins to model the impact of the proposed transportation plan or TIP on travel and/or emissions. New data that becomes available after an analysis begins is required to be used in the conformity determination only if a significant delay in the analysis has occurred, as determined through interagency consultation” (EPA, 2010b).

Latest Emissions Models — Section 93.111 requires that the latest emission estimation models specified for use in SIPs must be used for the conformity analysis. EPA has approved EMFAC2021 for conformity use on November 15, 2022, and the final rule started the two-year grace period to transition to the new emissions model for use in conformity demonstrations. EMFAC2021 will be used in this conformity analysis as documented in Chapter 3.

3) *Timely Implementation of TCMs* — Section 93.113 provides a detailed description of the steps necessary to demonstrate that the TIP/RTP are providing for the timely implementation of TCMs, as well as demonstrate that the plan and/or program is not interfering with this implementation. TCM documentation is included in Chapter 4 of the Conformity Analysis.

4) *Consultation* — Section 93.105 requires that the conformity determination be made in accordance with the consultation procedures outlined in the Federal regulations. These include:

- MPOs are required to provide reasonable opportunity for consultation with State air agencies, local air quality and transportation agencies, the USDOT and EPA (Section 93.105(a)(1)).
- MPOs are required to establish a proactive public involvement process, which provides opportunity for public review and comment prior to taking formal action on a conformity determination (Section 93.105(e)).

The TIP, RTP, their amendments, and corresponding conformity determinations are prepared by each MPO. Copies of the draft documents are provided to member agencies and others, including FHWA, Federal Transit Administration (FTA), EPA, Caltrans, CARB, and the Air District for review. The conformity analysis is required to be publicly available and an opportunity for public review and comment is provided Fresno Council of Governments adopted consultation process and policy for conformity analysis includes a 30-day comment period followed by a public meeting.

C. AIR QUALITY DESIGNATIONS APPLICABLE TO THE SAN JOAQUIN VALLEY

The conformity regulation (section 93.102) requires documentation of the applicable pollutants and precursors for which EPA has designated the area nonattainment or maintenance. In addition, the nonattainment or maintenance area and its boundaries should be described.

Fresno Council of Governments is located in the federally designated San Joaquin Valley Air Basin. The borders of the basin are defined by mountain and foothill ranges to the east and west. The northern border is consistent with the county line between San Joaquin and Sacramento Counties. The southern border is less defined, but is roughly bounded by the Tehachapi Mountains and, to some extent, the Sierra Nevada range. The Conformity Analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 includes analyses of existing and future air quality impacts for each applicable pollutant.

The San Joaquin Valley is currently designated as nonattainment for the National Ambient Air Quality Standard (NAAQS) for 8-hour ozone (revoked 1997, 2008 and 2015 standards), particulate matter under 2.5 microns in diameter (PM_{2.5}) (1997, 2006 and 2012 standards); and has a maintenance plan for particulate matter under 10 microns in diameter (PM-10). Note that the urbanized/metropolitan areas of Kern, Fresno, Stanislaus and San Joaquin Counties have attained the CO standard and maintained attainment for 20 years. In accordance with Section 93.102(b)(4), conformity requirements for the CO standard stop applying 20 years after EPA approves an attainment redesignation request or as of June 1, 2018. Therefore, future conformity analyses no longer include a CO conformity demonstration.

State Implementation Plans have been prepared to address ozone, PM-10 and PM_{2.5}:

- The 2016 Ozone Plan (2008 standard) was adopted by the Air District on June 16, 2016, and subsequently adopted by ARB on July 21, 2016. EPA found the new ozone budgets adequate on June 29, 2017 (effective July 14, 2017). In response to recent court decisions regarding the baseline RFP year, ARB adopted the revised 2008 ozone conformity budgets as part of the *2018 Updates to the California State Implementation Plan* (2018 SIP Update) on October 25, 2018. EPA approved the 2016 Ozone Plan and the budgets on March 25, 2019.
- The 2007 PM-10 Maintenance Plan (as revised in 2015) was approved by EPA on July 8, 2016 (effective September 30, 2016).
- The 2016 PM_{2.5} Plan and portions of the 2018 PM_{2.5} Plan (2012 Standard, moderate) was approved by EPA on November 26, 2021 (effective December 27, 2021).
- The 2018 PM_{2.5} Plan was partially approved by EPA on July 22, 2020 (effective as of publication) inclusive of the revised conformity budgets and trading mechanism for the 2006 24-hr PM_{2.5} standard. Then on November 26, 2021, EPA partially disapproved the original SIP submittal dealing with 1997 annual PM_{2.5} nonattainment. In response, CARB submitted a 2021 revision to the 2018 PM_{2.5} Plan demonstrating attainment by 2023. On January 28, 2022, EPA approved 2018 PM_{2.5} Plan portion dealing with the 1997 24-hour PM_{2.5} standard and determined that the SJV attained the standard by the December 31, 2020, deadline (effective February 28, 2022). On December 14, 2023, EPA approved the 1997 annual PM_{2.5} budgets and trading mechanism for attainment year 2023, effective January 16, 2024. Note that CARB withdrew 2018 PM_{2.5} Plan portions dealing with 2012 serious PM_{2.5} standards on October 27, 2022; therefore, moderate area budgets continue to apply.

EPA’s March 2015 final rule implementing the 2008 Ozone Standard also revoked the 1997 Ozone Standard for transportation conformity purposes. This revocation became effective April 6, 2015. On February 16, 2018, the U.S. Court of Appeals ruled against parts of the EPA’s 2015 Ozone Implementation Rule related to the revocation of the 1997 ozone standard and the relevant “anti-backsliding” requirements. However, according to the *Transportation Conformity Guidance for the South Coast II Court Decision*, nonattainment areas with existing 2008 ozone conformity budgets are not required to address the 1997 ozone standards for conformity purposes.

EPA designated the San Joaquin Valley nonattainment area for the 2008 Ozone Standard, effective July 20, 2012. Transportation conformity applies one year after the effective date (July 20, 2013). Federal approval for the eight SJV MPO’s 2008 Ozone standard conformity demonstrations was received on July 8, 2013.

On June 4, 2018, EPA published final designations classifying the San Joaquin Valley as “extreme” nonattainment for 2015 ozone with an attainment deadline of 2038, effective August 3, 2018. Transportation conformity applies one year after the effective date or August 3, 2019. It is important to note that the 2015 ozone standard nonattainment area boundary for the San Joaquin Valley is exactly the same as the nonattainment area boundary for the 2008 ozone standard.

On November 13, 2009, EPA published Air Quality Designations for the 2006 24-hour PM_{2.5} standard, effective December 14, 2009. Nonattainment areas are required to meet the standard by 2014; transportation conformity began to apply on December 14, 2010. On January 20, 2016 EPA published *Designation of Areas for Air Quality Planning Purposes; California; San Joaquin Valley; Reclassification as Serious Nonattainment for the 2006 PM_{2.5} NAAQS* finalizing SJV reclassification to Serious nonattainment effective February 19, 2016. Nonattainment areas are required to meet the standard as expeditiously as practicable, but no later than December 31, 2019. It is important to note that the 2006 24-hour PM_{2.5} nonattainment area boundary for the San Joaquin Valley is exactly the same as the nonattainment area boundary for the 1997 annual PM_{2.5} standard.

EPA’s nonattainment area designations for the new 2012 PM_{2.5} standards became effective on April 15, 2015. Conformity for a given pollutant and standard applies one year after the effective date (April 15, 2016). It is important to note that the 2012 PM_{2.5} standards nonattainment area boundary for the San Joaquin Valley are exactly the same as the nonattainment area boundary for the 1997 annual PM_{2.5} standard.

On July 29, 2016, EPA released its *Final Rule for Implementing National Ambient Air Quality Standards for Fine Particles*. According to the implementation rule, areas designated as nonattainment for the 1997 PM 2.5 standards, must continue to demonstrate conformity to these standards until attainment. In the San Joaquin Valley, the 1997 standards (both 24-hour and annual) continue to apply.

D. CONFORMITY TEST REQUIREMENTS

The conformity (Section 93.109(c)–(k)) rule requires that either a table or text description be provided that details, for each pollutant and precursor, whether the interim emissions tests and/or the budget test apply for conformity. In addition, documentation regarding which emissions

budgets have been found adequate by EPA, and which budgets are currently applicable for what analysis years is required.

Specific conformity test requirements established for the San Joaquin Valley nonattainment areas for ozone, and particulate matter are summarized below.

Section 93.124(d) of the 1997 Final Transportation Conformity regulation allows for conformity determinations for sub-regional emission budgets by MPOs if the applicable implementation plans (or implementation plan submission) explicitly indicates an intent to create such sub-regional budgets for the purpose of conformity. In addition, Section 93.124(e) of the 1997 rules states: "...if a nonattainment area includes more than one MPO, the implementation plan may establish motor vehicle emission budgets for each MPO, or else the MPOs must collectively make a conformity determination for the entire nonattainment area." Each applicable implementation plan and estimate of baseline emissions in the San Joaquin Valley provides motor vehicle emission budgets by county, to facilitate county-level conformity findings.

OZONE (2008 AND 2015 STANDARDS)

The San Joaquin Valley currently violates both the 2008 and 2015 ozone standards; thus the conformity determination includes all corresponding analyses (see discussion under Air Quality Designations Applicable to the San Joaquin Valley above). Under the existing conformity regulations, regional emissions analyses for ozone areas must address nitrogen oxides (NO_x) and volatile organic compounds (VOC) precursors. It is important to note that in California, reactive organic gases (ROG) are considered equivalent to and are used in place of volatile organic compounds (VOC).

EPA's final rule implementing the 2008 ozone standard also revoked the 1997 ozone standard for transportation conformity purposes. This revocation became effective April 6, 2015. Current federal guidance does not require 2008 ozone nonattainment areas to address the 1997 ozone standard for conformity purposes.

On March 25, 2019, EPA published a final rule approving the 2008 ozone conformity budgets and the *2018 Updates to the California State Implementation Plan*. The EPA final rule identified both reactive organic gases (ROG) and nitrogen oxides (NO_x) subarea budgets in tons per average summer day for each MPO in the nonattainment area.

In accordance with Section 93.109(c)(2) of the conformity rule and the 2015 Ozone Transportation Conformity Guidance, if a 2015 ozone nonattainment area has adequate or approved SIP budgets that address the 2008 ozone standard, it must use the budget test until new 2015 ozone standard budgets are found adequate or approved. It is important to note that the boundaries for the 2015 ozone standard and 2008 ozone standard are identical. In addition, the 2015 Ozone Implementation Rule did not revoke 2008 standard requirements. Consequently, for this conformity analysis, the SJV MPOs will conduct demonstrations for both 2008 and 2015 ozone standards using subarea emissions budgets as established in the *2018 Updates to the California State Implementation Plan*.

The conformity budgets from Table 1 of the March 25, 2019 Federal Register are provided in Table 1-1 below. These budgets will be used to compare to emissions resulting from the 2025 FTIP and the 2022 RTP Amendment No. 4.

**Table 1-1:
On-Road Motor Vehicle 2008 and 2015 Ozone Standard Emissions Budgets**
(summer tons/day)

| County | 2020 | | 2023 | | 2026 | | 2029 | | 2031 | |
|-------------|------|------|------|------|------|------|------|------|------|------|
| | ROG | NOx | ROG | NOx | ROG | NOx | ROG | NOx | ROG | NOx |
| Fresno | 6.7 | 23.9 | 5.5 | 14.1 | 4.9 | 13.2 | 4.5 | 12.4 | 4.2 | 12.1 |
| Kern (SJV) | 5.4 | 20.9 | 4.5 | 14.5 | 4.2 | 14.4 | 4.0 | 14.3 | 3.9 | 14.3 |
| Kings | 1.2 | 4.5 | 1.0 | 2.7 | 0.9 | 2.6 | 0.8 | 2.6 | 0.8 | 2.6 |
| Madera | 1.5 | 4.3 | 1.1 | 2.7 | 1.0 | 2.5 | 0.9 | 2.4 | 0.8 | 2.3 |
| Merced | 2.2 | 8.8 | 1.7 | 6.0 | 1.5 | 5.9 | 1.3 | 5.6 | 1.2 | 5.4 |
| San Joaquin | 4.7 | 11.2 | 3.9 | 7.4 | 3.5 | 7.0 | 3.1 | 6.6 | 2.8 | 6.3 |
| Stanislaus | 3.1 | 8.8 | 2.6 | 5.6 | 2.2 | 4.9 | 2.0 | 4.5 | 1.8 | 4.3 |
| Tulare | 3.0 | 7.6 | 2.4 | 4.6 | 2.1 | 4.0 | 1.8 | 3.7 | 1.7 | 3.5 |

^(a) Note that 2008 ozone budgets were established by rounding up each county’s emissions totals to the nearest tenth of a ton.

PM-10

The 2007 PM-10 Maintenance Plan (as revised in 2015) was conditionally approved by EPA on July 8, 2016 (effective September 30, 2016), which contains motor vehicle emission budgets for PM-10 and NOx, as well as a trading mechanism. Motor vehicle emission budgets are established based on average annual daily emissions. The motor vehicle emissions budget for PM-10 includes regional re-entrained dust from travel on paved roads, vehicular exhaust, travel on unpaved roads, and road construction. The conformity budgets from Table 2 of the August 12, 2016 Federal Register are provided in Table 1-2 below and will be used to compare emissions for each analysis year resulting from 2025 FTIP and 2022 RTP Amendment No. 4.

The PM-10 SIP allows trading from the motor vehicle emissions budget for the PM-10 precursor NOx to the motor vehicle emissions budget for primary PM-10 using a 1.5 to 1 ratio. The trading mechanism allows the agencies responsible for demonstrating transportation conformity in the San Joaquin Valley to supplement the 2005 budget for PM-10 with a portion of the 2005 budget for NOx, and use these adjusted motor vehicle emissions budgets for PM-10 and NOx to demonstrate transportation conformity with the PM-10 SIP for analysis years after 2005. As noted above, EPA approved the 2007 PM-10 Maintenance Plan (with minor technical corrections to the conformity budgets) on July 8, 2016, which includes continued approval of the trading mechanism.

The trading mechanism will be used only for conformity analyses for analysis years after 2005. To ensure that the trading mechanism does not impact the ability to meet the NOx budget, the NOx

emission reductions available to supplement the PM-10 budget shall only be those remaining after the NOx budget has been met.

**Table 1-2:
On-Road Motor Vehicle PM-10 Emissions Budgets**
(tons per average annual day)

| County | 2020 ^(b) | |
|---------------------|---------------------|------|
| | PM-10 | NOx |
| Fresno | 7.0 | 25.4 |
| Kern ^(a) | 7.4 | 23.3 |
| Kings | 1.8 | 4.8 |
| Madera | 2.5 | 4.7 |
| Merced | 3.8 | 8.9 |
| San Joaquin | 4.6 | 11.9 |
| Stanislaus | 3.7 | 9.6 |
| Tulare | 3.4 | 8.4 |

^(a)Kern County subarea includes only the portion of Kern County within the San Joaquin Valley Air Basin.

^(b)Note that EPA did not take action on the 2005 budgets of the 2007 PM10 Maintenance Plan (as revised in 2015). These budgets are not in the timeframe of this conformity analysis.

PM2.5

EPA and FHWA have indicated that areas violating both the annual and 24-hour standards for PM2.5 must address all standards in the conformity determination. The San Joaquin Valley currently violates both the 1997 annual and 24-hour and 2012 annual PM2.5 standards and the 2006 24-hour PM2.5 standards; thus the conformity determination includes all corresponding analyses (see discussion under Air Quality Designations Applicable to the San Joaquin Valley above).

The 2016 PM2.5 Plan addressing moderate area requirements for the 2012 PM2.5 standard was adopted by the San Joaquin Valley Air District on September 15, 2016. The 2018 PM2.5 Plan addressing 1997, 2006 and 2012 PM2.5 standards was adopted by the San Joaquin Valley Air District on November 15, 2018 and California Air Resources Board on January 24, 2019, and subsequently submitted for EPA review together with the 2016 Moderate PM2.5 Plan and reclassification to serious request. EPA approved SIP portions dealing with the moderate 2012 PM2.5 standard on November 26, 2021 (effective December 27, 2021). Note that CARB withdrew 2018 PM2.5 Plan portions dealing with the serious 2012 PM2.5 standard on October 27, 2022; therefore, moderate area budgets continue to apply.

On July 22, 2020, EPA published final rule approving 2018 PM2.5 SIP elements that pertain to 2006 24-hour PM2.5 standard serious area nonattainment (effective as of publication). Then on January 28, 2022, EPA approved 2018 PM2.5 Plan portion dealing with the 1997 24-hour PM2.5

standard and determined that the SJV attained the standard by the December 31, 2020 deadline (effective February 28, 2022).

While EPA partially disapproved the original SIP submittal dealing with 1997 annual PM2.5 nonattainment on November 26, 2021, CARB has submitted the 2021 revision to the 2018 PM2.5 Plan in the same month demonstrating attainment by 2023. On February 10, 2022, EPA found the 1997 annual PM2.5 budgets adequate, effective February 25, 2022. On December 14, 2023, EPA issued final approval of the remaining 1997 annual PM2.5 Plan elements (except for the contingency measures), including conformity budgets and the trading mechanism.

1997 (24-hour and annual) Standards

The 2018 PM2.5 Plan contains motor vehicle emission budgets for PM2.5 and NOx established based on average annual daily emissions, as well as a trading mechanism. The motor vehicle emissions budget for PM2.5 includes directly emitted PM2.5 motor vehicle emissions from tailpipe, brake wear and tire wear. VOC, SOx, ammonia, and dust (from paved roads, unpaved roads, and road construction) were found to be insignificant and not included in the motor vehicle emission budgets for conformity purposes. The applicable conformity budgets are provided in Table 1-3 for the 1997 annual and 24-hour PM2.5 standards and will be used to compare emissions resulting from the 2025 FTIP and the 2022 RTP Amendment No. 4.

**Table 1-3:
On-Road Motor Vehicle 1997 (24-hour and annual) PM2.5 Standard Emissions Budgets**
(tons per average annual day)

| County | 2020 | | 2023 | |
|-------------|-------|------|-------|------|
| | PM2.5 | NOx | PM2.5 | NOx |
| Fresno | 0.9 | 25.3 | 0.8 | 15.1 |
| Kern (SJV) | 0.8 | 23.3 | 0.7 | 13.3 |
| Kings | 0.2 | 4.8 | 0.2 | 2.8 |
| Madera | 0.2 | 4.2 | 0.2 | 2.5 |
| Merced | 0.3 | 8.9 | 0.3 | 5.3 |
| San Joaquin | 0.6 | 11.9 | 0.6 | 7.6 |
| Stanislaus | 0.4 | 9.6 | 0.4 | 6.1 |
| Tulare | 0.4 | 8.5 | 0.4 | 5.2 |

The 2018 PM2.5 SIP includes a trading mechanism that allows trading from the motor vehicle emissions budget for the PM2.5 precursor NOx to the motor vehicle emissions budget for primary PM2.5 using a 6.5 to 1 ratio on an annual basis and a 2 to 1 ratio on a 24-hr basis. The trading mechanism allows the agencies responsible for demonstrating transportation conformity in the San Joaquin Valley to supplement the applicable budget for PM2.5 with a portion of the applicable corresponding budget for NOx and use these adjusted motor vehicle emissions budgets for PM2.5 and NOx to demonstrate transportation conformity with the 2018 PM2.5 SIP. To ensure that the trading mechanism does not impact the ability to meet the NOx budget, the NOx emission reductions available to supplement the PM2.5 budget shall only be those remaining after the NOx

budget has been met. The trading mechanism for the 24-hour and annual PM_{2.5} was approved by EPA on January 28, 2022, and December 14, 2023, respectively.

2012 Annual PM_{2.5} Standard (Moderate and Serious)

On November 26, 2021, EPA published final approval of the moderate area SIP budgets for the 2012 PM_{2.5} standard contained in the 2016 Moderate Area PM_{2.5} Plan and portions of the 2018 PM_{2.5} plan that pertain to the moderate requirements for the 2012 PM_{2.5} standard. The approval also included reclassification to serious. On December 29, 2021, EPA proposed approval of the SIP elements and conformity budgets that pertain to the 2012 annual PM_{2.5} serious area requirements (final action expected by end of the year). CARB withdrew 2018 PM_{2.5} Plan portions dealing with the serious 2012 PM_{2.5} standard on October 27, 2022. Until the new 2012 serious area PM_{2.5} standard budgets are found adequate or approved, the SJV will conduct conformity determination for the 2012 annual PM_{2.5} standard using budgets established in the 2018 PM_{2.5} Plan for moderate nonattainment. The conformity budgets from the November 26, 2021 Federal Register are provided in Table 1-4 will be used to compare emissions resulting from 2025 FTIP and 2022 RTP Amendment No. 4.

Table 1-4:
On-Road Motor Vehicle 2012 (annual) PM_{2.5} Standard Emissions Budgets (Moderate)
(tons per average annual day)

| County | 2022 | |
|-------------|-------------------|-----------------|
| | PM _{2.5} | NO _x |
| Fresno | 0.9 | 21.2 |
| Kern (SJV) | 0.8 | 19.4 |
| Kings | 0.2 | 4.1 |
| Madera | 0.2 | 3.5 |
| Merced | 0.3 | 7.6 |
| San Joaquin | 0.6 | 10.0 |
| Stanislaus | 0.4 | 8.1 |
| Tulare | 0.4 | 6.9 |

The 2018 PM_{2.5} SIP includes a trading mechanism that allows trading from the motor vehicle emissions budget for the PM_{2.5} precursor NO_x to the motor vehicle emissions budget for primary PM_{2.5} using a 6.5 to 1 ratio on an annual basis. The trading mechanism allows the agencies responsible for demonstrating transportation conformity in the San Joaquin Valley to supplement the applicable budget for PM_{2.5} with a portion of the applicable corresponding budget for NO_x and use these adjusted motor vehicle emissions budgets for PM_{2.5} and NO_x to demonstrate transportation conformity with the 2018 PM_{2.5} SIP.

2006 24-Hour PM_{2.5} Standard

The 2018 PM_{2.5} Plan addressing 1997, 2006 and 2012 PM_{2.5} standards was adopted by the San Joaquin Valley Air District on November 15, 2018 and California Air Resources Board on January 24, 2019. On March 27, EPA published a proposed rule approving portions of the 2018 PM_{2.5} Plan, including the 2006 PM_{2.5} conformity budgets and trading mechanism. Final rule on sections that pertain to 2006 24-hour PM_{2.5} standard serious area nonattainment was published on July 22, 2020. Therefore, the conformity analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 incorporates new transportation conformity budgets and the new attainment year of 2024 for 2006 24-hour PM_{2.5} standards.

The 2018 PM_{2.5} Plan for the 2006 PM_{2.5} standard contains motor vehicle emission budgets for PM_{2.5} and NO_x established based on average winter daily emissions, as well as a trading mechanism. The motor vehicle emissions budget for PM_{2.5} includes directly emitted PM_{2.5} motor vehicle emissions from tailpipe, brake wear and tire wear. VOC, SO_x, ammonia, and dust (from paved roads, unpaved roads, and road construction) were found to be insignificant and not included in the motor vehicle emission budgets for conformity purposes. The conformity budgets from the March 27, 2020 Federal Register, Table 14 are provided in Table 1-5 below and will be used to compare emissions resulting from the 2025 FTIP and the 2022 RTP Amendment No. 4.

Table 1-5
On-Road Motor Vehicle 2006 24-Hour PM_{2.5} Standard Emissions Budgets
(tons per average winter day)

| County | 2020 | | 2023 | | 2024 | |
|-------------|-------------------|-----------------|-------------------|-----------------|-------------------|-----------------|
| | PM _{2.5} | NO _x | PM _{2.5} | NO _x | PM _{2.5} | NO _x |
| Fresno | 0.9 | 25.9 | 0.8 | 15.5 | 0.8 | 15.0 |
| Kern (SJV) | 0.8 | 23.8 | 0.7 | 13.6 | 0.7 | 13.4 |
| Kings | 0.2 | 4.9 | 0.2 | 2.9 | 0.2 | 2.8 |
| Madera | 0.2 | 4.4 | 0.2 | 2.6 | 0.2 | 2.5 |
| Merced | 0.3 | 9.1 | 0.3 | 5.5 | 0.3 | 5.3 |
| San Joaquin | 0.6 | 12.3 | 0.6 | 7.9 | 0.6 | 7.6 |
| Stanislaus | 0.4 | 9.8 | 0.4 | 6.2 | 0.4 | 6.0 |
| Tulare | 0.4 | 8.7 | 0.4 | 5.3 | 0.4 | 5.1 |

The 2018 PM_{2.5} SIP includes a trading mechanism that allows trading from the motor vehicle emissions budget for the PM_{2.5} precursor NO_x to the motor vehicle emissions budget for primary PM-2.5 using a 2 to 1 ratio on a 24-hour, wintertime basis. The trading mechanism allows the agencies responsible for demonstrating transportation conformity in the San Joaquin Valley to supplement the applicable budget for PM_{2.5} with a portion of the applicable corresponding budget for NO_x, and use these adjusted motor vehicle emissions budgets for PM_{2.5} and NO_x to demonstrate transportation conformity with the PM_{2.5} SIP.

E. ANALYSIS YEARS

The conformity regulation (Section 93.118[b] and [d]) requires documentation of the years for which consistency with motor vehicle emission budgets must be shown. In addition, any interpolation performed to meet tests for years in which specific analysis is not required need to be documented.

For the selection of the horizon years, the conformity regulation requires: (1) that if the attainment year is in the time span of the transportation plan, it must be modeled; (2) the last year forecast in the transportation plan must be a horizon year; and (3) horizon years may not be more than ten years apart. In addition, the conformity regulation requires that conformity must be demonstrated for each year for which the applicable implementation plan specifically establishes motor vehicle emission budgets, unless its outside of the timeframe for the conformity analysis.

Section 93.118(b)(2) clarifies that when a maintenance plan has been submitted, conformity must be demonstrated for the last year of the maintenance plan and any other years for which the maintenance plan establishes budgets in the time frame of the transportation plan. Section 93.118(d)(2) indicates that a regional emissions analysis may be performed for any years, the attainment year, and the last year of the plan's forecast. Other years may be determined by interpolating between the years for which the regional emissions analysis is performed.

Section 93.118(d)(2) indicates that the regional emissions analysis may be performed for any years in the time frame of the transportation plan provided they are not more than ten years apart and provided the analysis is performed for the attainment year (if it is in the time frame of the transportation plan) and the last year of the plan's forecast period. Emissions in years for which consistency with motor vehicle emissions budgets must be demonstrated, as required in paragraph (b) of this section (i.e., each budget year), may be determined by interpolating between the years for which the regional emissions analysis is performed. Table 1-6 below provides a summary of conformity analysis years that apply to this conformity analysis.

**Table 1-6:
San Joaquin Valley Conformity Analysis Years**

| Pollutant | Budget Years¹ | Attainment/ Maintenance Year | Intermediate Years | RTP Horizon Year |
|--|---------------------------------|---|-------------------------------|-----------------------------|
| 2008 and 2015 Ozone | 2020/2023/2026/2029 | 2031/2037 ² | 2025 | 2046 |
| PM-10 | NA | 2020 | 2025/2029/2037 | 2046 |
| 1997 24-hour PM2.5 | NA | 2020 | 2025/2029/2037 | 2046 |
| 1997 Annual PM2.5 | NA | 2023 | 2025/2029/2037 | 2046 |
| 2012 Annual PM2.5 (Moderate and Serious) | NA | 2022/2025 ³ | 2029/2037 | 2046 |
| 2006 24-hour PM2.5 | 2020/2023 | 2024 | 2031/2037 | 2046 |

¹Budget years that are not in the time frame of the transportation plan/conformity analysis are not included as analysis years (e.g., 2020, 2023), although they may be used to demonstrate conformity. Some of the early RFP year budgets were not acted on by EPA since they were not applicable.

²2031 is the attainment year for the 2008 ozone standard. 2037 is the attainment year for the 2015 ozone standard.

³2022 is the attainment year for the moderate 2012 PM2.5 standard (not in the timeframe of this analysis). 2025 is the attainment year for the serious 2012 PM2.5 standard.

For the 2008 ozone standard, the San Joaquin Valley has been classified as an extreme nonattainment area with an attainment date of July 20, 2032. In accordance with the March 2015 *Implementation of the 2008 National Ambient Air Quality Standards for Ozone: State Implementation Plan Requirements* final rule, the attainment year of 2031 must be modeled. When using the budget test, the attainment year of the 2008 ozone standard must be analyzed (i.e. 2031).

For the 2015 ozone standard, the San Joaquin Valley has been classified as an extreme nonattainment area with an attainment date of August 3, 2038. In accordance with the December 2018 final rule, *Implementation of the 2015 National Ambient Air Quality Standards for Ozone: Nonattainment Area State Implementation Plan Requirements*, the attainment year of 2037 must be modeled. When using the budget test, the attainment year of the 2015 ozone standard must be analyzed (i.e. 2037).

The Clean Air Act requires all states to attain the 1997 PM2.5 standards as expeditiously as practicable beginning in 2010, but by no later than April 5, 2010 unless EPA approves an attainment date extension. States must identify their attainment dates based on the rate of reductions from their control strategies and the severity of the PM2.5 problem. The 2018 PM2.5 SIP addresses attainment of the 1997 24-hour PM2.5 standard (serious) by 2020 and was approved by EPA on January 28, 2022 (effective February 28, 2022). The attainment year is not in the timeframe of this conformity analysis. On February 10, 2022, EPA found the serious area 1997 annual PM2.5 budgets for attainment year 2023 adequate (effective February 25, 2022) and issues final approval

inclusive of the trading mechanism on December 14, 2023. The attainment year is not in the timeframe of this conformity analysis.

On January 20, 2016, EPA finalized reclassification of the San Joaquin Valley to Serious nonattainment for the 2006 24-hour PM_{2.5} Standard. On August 16, 2016, the 2012 PM_{2.5} Plan was approved by EPA, effective September 30, 2016, inclusive of new conformity budgets and trading mechanism for the 2006 24-hour PM_{2.5} standard with a requirement to attain the standard as expeditiously as practicable and no later than December 31, 2019. In 2019, CARB submitted an attainment deadline extension request as part of the 2018 PM_{2.5} Plan. Final rule on 2018 PM_{2.5} SIP sections that pertain to 2006 24-hour PM_{2.5} standard Serious area nonattainment was released on July 22, 2020. The attainment year is not in the timeframe of this conformity analysis.

On January 15, 2015, EPA classified the San Joaquin Valley as Moderate nonattainment for the 2012 PM_{2.5} Standards. On November 26, 2021, EPA issued final rule approving the Moderate Area 2016 PM_{2.5} Plan, portions of the 2018 PM_{2.5} SIP pertaining to moderate nonattainment of the 2012 PM_{2.5} standards, and the reclassification request to serious nonattainment. The San Joaquin Valley 2018 PM_{2.5} Plan includes serious area budgets for the 2012 PM_{2.5} standards with an attainment deadline of 2025; therefore, the attainment year 2025 must be modeled.

CHAPTER 2: LATEST PLANNING ASSUMPTIONS AND TRANSPORTATION MODELING

The Clean Air Act states that “the determination of conformity shall be based on the most recent estimates of emissions, and such estimates shall be determined from the most recent population, employment, travel, and congestion estimates as determined by the MPO or other agency authorized to make such estimates.” On January 18, 2001, the USDOT issued guidance developed jointly with EPA to provide additional clarification concerning the use of latest planning assumptions in conformity determinations (USDOT, 2001).

According to the conformity regulation, the time the conformity analysis begins is “the point at which the MPO or other designated agency begins to model the impact of the proposed transportation plan or TIP on travel and/or emissions.” The conformity analysis and initial emissions modeling began in March of 2024.

Key elements of the latest planning assumption guidance include:

- Areas are strongly encouraged to review and strive towards regular five-year updates of planning assumptions, especially population, employment and vehicle registration assumptions.
- The latest planning assumptions must be derived from the population, employment, travel and congestion estimates that have been most recently developed by the MPO (or other agency authorized to make such estimates) and approved by the MPO.
- Conformity determinations that are based on information that is older than five years should include written justification for not using more recent information. For areas where updates are appropriate, the conformity determination should include an anticipated schedule for updating assumptions.
- The conformity determination must use the latest existing information regarding the effectiveness of the transportation control measures (TCMs) and other implementation plan measures that have already been implemented.

The Fresno Council of Governments uses the Activity-based transportation model. The model was validated in 2018 for the 2014 base year. The latest planning assumptions used in the transportation model validation and this Conformity Analysis is summarized in Table 2-1.

**Table 2-1:
Summary of Latest Planning Assumptions for the Fresno Council of Governments
Conformity Analysis**

| Assumption | Year and Source of Data (MPO action) | Modeling | Next Scheduled Update |
|-------------------|---|--|---|
| Population | <p>Base Year: Population is based on the 2014 California Department of Finance data.</p> <p>Projections: Population based on Applied Development Economics, 2020.</p> | <p>These data were disaggregated to the Micro Analysis Zone (MAZ) and Traffic Analysis Zone (TAZ) levels and used in the PopulationSim/DaySim/Cube model for the base year validation and future year projections.</p> | <p>Population and Employment projections will be reviewed and updated periodically with an upcoming update in 2022.</p> |
| Employment | <p>Base Year: Employment data is based on 2014 State of California Employment Development Department data.</p> <p>Projections: Employment based on Applied Development Economics, 2020.</p> | <p>These data were disaggregated to the MAZ and TAZ levels and used in the PopulationSim/DaySim/Cube model for the base year validation and future year projections.</p> | <p>Population and Employment projections will be reviewed and updated periodically with an upcoming update in 2022.</p> |

| Assumption | Year and Source of Data (MPO action) | Modeling | Next Scheduled Update |
|-------------------------|--|--|---|
| Traffic Counts | The transportation model was validated in 2017 to the 2014 base year using daily and peak hour traffic counts. More than 1,000 traffic counts were obtained from the City of Fresno, Clovis, the County of Fresno and Caltrans. The majority of the traffic count database is from 2014. However, traffic counts from 2015 through 2016 were used, adjusted to 2014 levels based on annual growth rates. | Cube was validated using these traffic counts. | Fresno COG maintains a Regional Traffic Monitoring Program that collects thousands of traffic counts annually. New counts for 2014 base year were compiled for the Activity Based Model (ABM) validation. |
| Vehicle Miles of Travel | The base year 2014 VMT of the ABM is validated to within 3.7% of HPMS. Fresno COG is continuing its efforts to improve the model validation. | PopulationSim/DaySim/Cube is the transportation model used to estimate VMT in Fresno County. | VMT is an output of the transportation model. VMT is affected by the TIP/RTP project updates and is included in each new conformity analysis. |
| Speeds | The ABM validation was based on the comprehensive speed study in 2005. Speed distributions were updated in EMFAC2021, using methodology approved by ARB and with information from the transportation model. | The DaySim/Cube transportation model includes a feedback loop that assures congested speeds are consistent with travel speeds used throughout the traffic modeling process. EMFAC2021 | Traffic speeds are continuously monitored by our local jurisdictions. The information is then provided to Fresno COG for use in our traffic modeling process. |

A. SOCIOECONOMIC DATA

POPULATION, EMPLOYMENT AND LAND USE

The conformity regulation requires documentation of base case and projected population, employment, and land use used in the transportation modeling. USDOT/EPA guidance indicates that if the data is more than five years old, written justification for the use of older data must be provided. In addition, documentation is required for how land use development scenarios are consistent with future transportation system alternatives, and the reasonable distribution of employment and residences for each alternative.

Supporting Documentation:

POPULATION FORECAST

The forecasts used for the conformity analysis were from updates to the Fresno County 2050 Growth Projections prepared by Applied Development Economics (ADE), May 2017. Fresno COG has commissioned ADE to update these forecasts with new information, especially with regards to the economic impacts of the COVID-19 pandemic. This update process employs a similar methodology to the 2017 report, and is consistent with forecasts from several independent sources, including the Department of Finance's most recent population projections. The ADE study Fresno County 2050 Growth Projections can be accessed through Fresno COG's website.

This study includes annual forecasts stratified by the 16 jurisdictions within Fresno County: the spheres of influence of the 15 incorporated cities, and the unincorporated balance of the County geography. The study includes two primary forecasts of population and employment, from which are derived other projections related to housing demand and demographics, such as households, housing units, age distribution, group quarters populations, average income, race/ethnicity, school enrollment, etc.

The methodology of this study can be summed up in the following excerpt:

The study process began by developing a range of total population and employment projections for the county as a whole, reflecting varying assumptions about Fresno County's future share of regional growth as well as trends in industry growth. The employment projection methodology used an economic base approach, forecasting export industry sectors, while local serving business sectors follow growth in the economic base and in the population.

Based on the growth forecast updates, countywide population will grow to an estimated 1,396,100 persons by the year 2046. More details can be found in the final report.

Fresno County Population, Housing and Employment Estimates and Forecasts

| Horizon Year | Total Population | Employment | Households |
|---------------------|-------------------------|-------------------|-------------------|
| 2024 | 1,107,300 | 416,800 | 344,060 |
| 2025 | 1,122,840 | 422,000 | 348,120 |
| 2026 | 1,136,300 | 426,100 | 351,020 |
| 2029 | 1,177,700 | 437,500 | 359,860 |
| 2031 | 1,205,000 | 445,000 | 365,310 |
| 2037 | 1,284,200 | 466,800 | 380,690 |
| 2046 | 1,396,100 | 494,400 | 409,030 |

EMPLOYMENT FORECAST

Employment was forecast by ADE using forecast data from the State of California Employment Development Department, Wood and Poole, and Caltrans. These forecasts are also being adjusted, and preliminary results have been included in these conformity analyses. These projections were made in several steps, including: projecting economic base sectors (including farm jobs and agricultural services, manufacturing, transportation, etc.); projecting local-serving employment sectors (such as retail and service jobs) by obtaining business-to-business employment multipliers from the IMPLAN input-output model for Fresno County, and developing a set of population-based multipliers to generate business employment from residential demand; and projecting health care sector jobs by using the recent project from Economic Modeling Specialists Institute (EMSI), which considers changes in the health care field and demographic demands in its methodology.

The resulting employment forecast is included in the table above.

HOUSEHOLD FORECAST

The population and household projections depend on a population cohort survival model developed by ADE. This model applied age- and race-adjusted birth- and death-rate factors to project the 2010 decennial Census data forward to 2015, in order to estimate the natural change in populations for each jurisdiction. These natural change populations were then compared to the California Department of Finance's 2015 population estimates, attributing city- and County-level differences between the two datasets to in- or out-migration. The 2015 natural change population for each SOI was then adjusted to the DOF 2015 population estimates. The population cohort survival method was then applied to the 2015 data for each subsequent year out to 2050, applying a growth rate consistent with that of the DOF's population projection estimates.

The resulting household forecast is included in the table above.

B. TRANSPORTATION MODELING

The San Joaquin Valley Metropolitan Planning Organizations (MPOs) utilize the Cube traffic modeling software. The Valley MPO regional traffic models consist of traditional four-step traffic forecasting models. They use land use, socioeconomic, and road network data to estimate facility-specific roadway traffic volumes. Each MPO model covers the appropriate county area, which is

then divided into hundreds or thousands of individual traffic analysis zones (TAZs). In addition the model roadway networks include thousands of nodes and links. Link types include freeway, freeway ramp, other State route, expressway, arterial, collector, and local collector. Current and future-year road networks were developed considering local agency circulation elements of their general plans, traffic impact studies, capital improvement programs, and the State Transportation Improvement Program. The models use equilibrium, a capacity sensitive assignment methodology, and the data from the model for the emission estimates differentiates between peak and off-peak volumes and speeds. In addition, the model is reasonably sensitive to changes in time and other factors affecting travel choices. The results from model validation/calibration were analyzed for reasonableness and compared to historical trends.

Specific transportation modeling requirements in the conformity regulation are summarized below, followed by a description of how the Fresno Council of Governments transportation modeling methodology meets those requirements.

Fresno COG developed a new activity-based model (ABM) in 2018 with a base year of 2014. The Fresno COG regional traffic model uses land use, socioeconomic, and road network data to estimate facility-specific roadway traffic volumes. The study area for the Fresno COG model covers all of Fresno County including the cities of Clovis, Coalinga, Firebaugh, Fowler, Fresno, Huron, Kerman, Kingsburg, Mendota, Orange Cove, Parlier, Reedley, San Joaquin, Sanger, and Selma. The county is divided up into approximately 2,000 traffic analysis zones (TAZ) and 23,500 micro analysis zones (MAZ). The model roadway network is based on the all-street network, which provides greater geometric details and more accurate link distances. Link types include freeway, freeway ramp, other state route, expressway, arterial, collector, and local collector. Current and future-year road networks were developed considering local agency circulation elements of their general plans, traffic impact studies, capital improvement programs, and the State Transportation Improvement Program.

The Fresno COG model has been set up to estimate travel demand during six periods:

- AM peak three-hour period
- PM peak three-hour period
- Off-peak eleven hours
- Mid-Day seven hours
- AM peak hour
- PM peak hour

The traffic volumes projected for the three-hour peak periods, mid-day seven hours, off-peak eleven hours, and remaining hours are added together to create daily traffic projections.

The model and its assumptions are constantly being updated based upon the latest planning information.

TRAFFIC COUNTS

The conformity regulation requires documentation that a network-based travel model is in use that is validated against observed counts for a base year no more than 10 years before the date of the

conformity determination. Document that the model results have been analyzed for reasonableness and compared to historical trends and explain any significant differences between past trends and forecasts (for per capita vehicle-trips, VMT, trip lengths mode shares, time of day, etc.).

Supporting Documentation:

Fresno COG developed the new ABM in 2018 with a base year of 2014. The model was validated by comparing its estimates of 2014 traffic conditions with more than 2,000 peak and off-peak traffic counts. The model validation results demonstrate the model performs acceptably at a regional scale especially for key metrics such as VMT and higher volume roadways.

Fresno COG maintains a Regional Traffic Monitoring Program that collects thousands of traffic counts across the county annually. The City of Fresno, City of Clovis and Fresno County are the three agencies that participate in this program.

SPEEDS

The conformity regulation requires documentation of the use of capacity sensitive assignment methodology and emissions estimates based on a methodology that differentiates between peak and off-peak volumes and speeds, and bases speeds on final assigned volumes. In addition, documentation of the use of zone-to-zone travel impedances to distribute trips in reasonable agreement with the travel times estimated from final assigned traffic volumes. Where transit is a significant factor, document that zone-to-zone travel impedances used to distribute trips are used to model mode split. Finally, document that reasonable methods were used to estimate traffic speeds and delays in a manner sensitive to the estimated volume of travel on each roadway segment represented in the travel model.

Supporting Documentation:

Due to speed's impact on pollution emission from automobiles, and because congestion speeds are used as input to air pollution emission models, it is vital that congested speeds from the travel model reasonably replicate characteristics of traffic on the streets. Good free-flow speed data in the travel model is the first step towards achieving this goal.

A comprehensive review of free flow speed data (including floating car speed studies) was conducted in 2005 and incorporated into our model update. In addition, Fresno COG member agencies regularly conduct free flow speed surveys for various purposes. Such speed data was requested by Fresno COG during the latest model update and incorporated in the model as input during the model validation.

TRANSIT

The conformity regulation requires documentation of any changes in transit operating policies and assumed ridership levels since the previous conformity determination. Document the use of the latest transit fares and road and bridge tolls.

Supporting Documentation:

Fresno COG has been running a mode choice model since 2003. The model replicates major transit services in Fresno County, including Fresno Area Express (FAX), Clovis Transit Stageline and Fresno County Rural Transit Agency. Please refer to Urban Mass Transportation and Rural Area Public Transportation and Social Service Transportation in the 2022 RTP for further information regarding the services, their accomplishments and proposed actions.

The modal incorporated the latest transit fare structure for all transit services. The mode choice model uses a multinomial logit formulation, which assigns the probability of using a particular travel mode based on attractiveness measure for that mode in relation to the sum of the attractiveness of the other mode. The model predicts the following seven modes:

1. Drive Alone
2. 2-Person vehicle
3. 3+-Person vehicle
4. Walk to Transit
5. Drive to Transit
6. Walk
7. Bike

Daily transit trips are assigned to the transit network. Transit trips are assigned to the single best path based on in-vehicle time plus weighted out-of- vehicle times. The transit trips are assigned in four groups:

1. Peak period (A.M. plus P.M.), walk access
2. Peak period (A.M. plus P.M.), drive access
3. Off-peak, walk access
4. Off-peak, drive access

The peak period transit trips represent trips occurring during the A.M. three-hour peak period plus the P.M. three-hour peak period. Peak period transit trips are assigned to the peak transit service (peak period headways) with travel times based on the congested speeds from the A.M. peak period traffic assignment. Off-peak transit trips represent trips during the remaining 18 hours and are assigned to the off-peak transit service (off-peak headways) with travel times based on the congested road speeds from the off-peak traffic assignment.

Transit trips are all assigned as production to attraction rather than origin to destination. For example, a person who uses transit for work will be assigned as two trips from the home TAZ to the work TAZ rather than one trip in each direction. This is done so that the model can keep track of which end of the trip can use drive access. In order to convert to actual directional boarding's, the assigned transit trips in each direction must be added together and then divided by two. The transit vehicles times and drive access times are affected by congestion on the road network.

VALIDATION/CALIBRATION

The conformity regulation requires documentation that the model results have been analyzed for reasonableness and compared to historical trends and explain any significant differences between

past trends and forecasts (for per capita vehicle-trips, VMT, trip lengths mode shares, time of day, etc.). In addition, documentation of how travel models are reasonably sensitive to changes in time, cost, and other factors affecting travel choices is required. The use of HPMS, or a locally developed count-based program or procedures that have been chosen to reconcile and calibrate the network-based travel model estimates of VMT must be documented.

Supporting Documentation:

The models were validated by comparing its estimates of base year traffic conditions with base year traffic counts. The base year validations meet standard criteria for replicating total traffic volumes on various road types and for percent error on links. The base year validation also meets standard criteria for percent error relative to traffic counts on groups of roads (screen-lines) throughout each county. Multiple sensitivity tests were conducted on the base year model, including auto operating cost, transit fare, change in land use patterns, and new high-frequency transit services. In general, the model responded appropriately to change in various input changes.

For Serious and above nonattainment areas, transportation conformity guidance, Section 93.122(b)(3) of the conformity regulation states:

Highway Performance Monitoring System (HPMS) estimates of vehicle miles traveled (VMT) shall be considered the primary measure of VMT within the portion of the nonattainment or maintenance area and for the functional classes of roadways included in HPMS, for urban areas which are sampled on a separate urban area basis. For areas with network-based travel models, a factor (or factors) may be developed to reconcile and calibrate the network-based travel model estimates of VMT in the base year of its validation to the HPMS estimates for the same period. These factors may then be applied to model estimates of future VMT. In this factoring process, consideration will be given to differences between HPMS and network-based travel models, such as differences in the facility coverage of the HPMS and the modeling network description. Locally developed count-based programs and other departures from these procedures are permitted subject to the interagency consultation procedures.

The Fresno COG Model traffic validation is based on several criteria, including vehicle-miles of travel, total volume by road type, and percent of links within acceptable limits.

Vehicle miles of travel (VMT) were estimated from the travel demand model by multiplying link volumes by link distances. The model estimates intrazonal trips (trips remaining within a TAZ) but does not assign these trips to the model road network. The intrazonal trips were multiplied by the estimated intrazonal distances to calculate intrazonal VMT. The Caltrans HPMS 2014 estimate of VMT in Fresno County was 22,574,620. The 2014 model base year estimated 21,745,004 VMT, which is 3.7% lower than the 2014 HPMS VMT target.

FUTURE NETWORKS

The conformity regulation requires that a listing of regionally significant projects and federally-funded non-regionally significant projects assumed in the regional emissions analysis be provided in the conformity documentation. In addition, all projects that are exempt must also be documented.

§93.106(a)(2)ii and §93.122(a)(1) requires that regionally significant additions or modifications to the existing transportation network that are expected to be open to traffic in each analysis year be documented for both Federally funded and non-federally funded projects (see Appendix B).

§93.122(a)(1) requires that VMT for non-regionally significant Federal projects is accounted for in the regional emissions analysis. It is assumed that all SJV MPOs include these projects in the transportation network (see Appendix B).

§93.126, §93.127, §93.128 require that all projects in the TIP/RTP that are exempt from conformity requirements or exempt from the regional emissions analysis be documented. In addition, the reason for the exemption (Table 2, Table 3, traffic signal synchronization) must also be documented (see Appendix B). It is important to note that the CTIPs exemption code is provided in response to FHWA direction.

Supporting Documentation:

The build highway networks include qualifying projects based on the 2025 FTIP and 2022 RTP Amendment No. 4. Not all of the street and freeway projects included in the TIP/RTP qualify for inclusion in the highway network. Projects that call for study, design, or non-capacity improvements are not included in the networks. When these projects result in actual facility construction projects, the associated capacity changes are coded into the network as appropriate. Since the networks define capacity in terms of number of through traffic lanes, only construction projects that increase the lane-miles of through traffic are included.

Generally, Valley MPO highway networks include all roadways included in the county or cities classified system. These links typically include all freeways plus expressways, arterials, collectors and local collectors. Highway networks also include regionally significant planned local improvements from Transportation Impact Fee Programs and developer funded improvements required to mitigate the impact of a new development.

Small-scale local street improvements contained in the TIP/RTP are not coded on the highway network. Although not explicitly coded, traffic on collector and local streets is simulated in the models by use of abstract links called “centroid connectors”. These represent local streets and driveways which connect a neighborhood to a regionally significant roadway. Model estimates of centroid connector travel are reconciled against HPMS estimates of collector and local street travel.

C. TRAFFIC ESTIMATES

A summary of the population, employment, and travel characteristics for the Fresno Council of Governments transportation modeling area for each scenario in the Conformity Analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 is presented in Table 2-2.

**Table 2-2:
Traffic Network Comparison for Horizon Years Evaluated in Conformity Analysis**

| Horizon Year | Total Population | Employment | Average Weekday VMT (millions) | Total Lane Miles |
|---------------------|-------------------------|-------------------|---------------------------------------|-------------------------|
| 2024 | 1,107,300 | 416,800 | 24.2 | N/A |
| 2025 | 1,122,840 | 422,000 | 23.9 | 6,821 |
| 2026 | 1,136,300 | 426,100 | 24.1 | N/A |
| 2029 | 1,177,700 | 437,500 | 24.5 | 6,930 |
| 2031 | 1,205,000 | 445,000 | 24.7 | N/A |
| 2037 | 1,284,200 | 466,800 | 28.1 | 7,250 |
| 2046 | 1,396,100 | 494,400 | 28.6 | 7,316 |

D. VEHICLE REGISTRATIONS

Fresno Council of Governments does not estimate vehicle registrations, age distributions or fleet mix. Rather, current forecasted estimates for these data are developed by CARB and included in the EMFAC2021 model. Vehicle registrations, age distribution and fleet mix are developed and included in the model by CARB and cannot be updated by the user. EPA issued final approval for EMFAC2021 use in conformity demonstrations on November 15, 2022; therefore, the Conformity Analysis for the 2025 FTIP and the 2022 RTP Amendment No. 4 relies on assumptions incorporated in EMFAC2021.

E. STATE IMPLEMENTATION PLAN MEASURES

The air quality modeling procedures and associated spreadsheets contained in Chapter 3 Air Quality Modeling assume emission reductions consistent with the applicable air quality plans. The emission reductions assumed for these committed measures reflect the latest implementation status of these measures. Committed control measures in the applicable air quality plans that reduce mobile source emissions and are used in conformity, are summarized below.

OZONE

No committed control measures are included in the 2016 Ozone Plan.

PM-10

Committed control measures in the EPA approved 2007 PM-10 Maintenance Plan that reduce mobile source emissions are shown in Table 2-3. However, reductions from these control measures were not applied to this conformity analysis because they were not needed to demonstrate conformity.

**Table 2-3:
2007 PM-10 Maintenance Plan Measures Assumed in the Conformity Analysis**

| Measure Description | Pollutants |
|---|--|
| ARB existing Reflash, Idling, and Moyer | PM-10 annual exhaust NOx annual exhaust |
| District Rule 8061: Paved and Unpaved Roads | PM-10 paved road dust PM-10 unpaved road dust |
| District Rule 8021 Controls: Construction, Demolition, Excavation, Extraction, and Other Earthmoving Activities | PM-10 road construction dust |

NOTE: State reductions from these measures have been included in EMFAC2021.

PM2.5

No committed control measures are included in the 2016 PM2.5 Plan and the 2018 PM2.5 Plan.

CHAPTER 3: AIR QUALITY MODELING

The model used to estimate vehicle exhaust emissions for ozone precursors and particulate matter is EMFAC2021. CARB emission factors for PM10 have been used to calculate re-entrained paved and unpaved road dust, and fugitive dust associated with road construction. For this conformity analysis, model inputs not dependent on the TIP or RTP are consistent with the applicable SIPs, which include:

- The 2016 Ozone Plan (2008 standard) was adopted by the Air District on June 16, 2016 and subsequently adopted by the ARB on July 21, 2016. EPA found the new ozone budgets adequate on June 29, 2017 (effective July 14, 2017). In response to recent court decisions regarding the baseline RFP year, ARB adopted the revised 2008 ozone conformity budgets as part of the 2018 Updates to the California State Implementation Plan Update on October 25, 2018. EPA approved the budgets and the plan on March 25, 2019.
- The 2007 PM-10 Maintenance Plan (as revised in 2015) was approved by EPA on July 8, 2016 (effective September 30, 2016).
- The 2016 PM2.5 Plan and portions of the 2018 PM2.5 Plan (2012 Standard, moderate) was approved by EPA on November 26, 2021 (effective December 27, 2021).
- The 2018 PM2.5 Plan was partially approved by EPA on July 22, 2020 (effective as of publication) inclusive of the revised conformity budgets and trading mechanism for the 2006 24-hr PM2.5 standard. Then on November 26, 2021, EPA partially disapproved the original SIP submittal dealing with 1997 annual PM2.5 nonattainment. In response, CARB submitted a 2021 revision to the 2018 PM2.5 Plan demonstrating attainment by 2023. On January 28, 2022, EPA approved 2018 PM2.5 Plan portion dealing with the 1997 24-hour PM2.5 standard and determined that the SJV attained the standard by the December 31, 2020 deadline (effective February 28, 2022). On December 14, 2023, EPA approved the 1997 annual PM2.5 budgets and trading mechanism for attainment year 2023, effective January 16, 2024. Note that CARB withdrew 2018 PM2.5 Plan portions dealing with 2012 serious PM2.5 standards on October 27, 2022; therefore, moderate area budgets continue to apply.

The conformity regulation requirements for the selection of the horizon years are summarized in Chapter 1; regional emissions have been estimated for the horizon years summarized in Table 1-6.

A. EMFAC2021

The EMFAC model (short for Emission FACtor) is a computer emissions modeling software that estimates emission rates for motor vehicles for calendar years from 2000 to 2050 operating in California. Pollutant emissions for hydrocarbons, carbon monoxide, nitrogen oxides, particulate matter, lead, sulfur oxides, and carbon dioxide are output from the model. Emissions are calculated for passenger cars, light, heavy, and medium-duty trucks, motorcycles, buses and motor homes.

EMFAC2021 (Scenario Analysis) is used to calculate current and future inventories of motor vehicle emissions at the state, county, air district, air basin, or MPO level. EMFAC contains default vehicle activity data that can be used to estimate a motor vehicle emissions inventory in tons/day for a specific year and season, and as a function of ambient temperature, relative humidity, vehicle population, mileage accrual, miles of travel, and vehicle speeds.

Section 93.111 of the conformity regulation requires the use of the latest emission estimation model in the development of conformity determinations.

On January 15, 2021 ARB released the latest update to the EMFAC model – EMFAC2021v1.0.0. Then in April of 2022, CARB released an updated version of the model (v1.0.2) fixing a number of minor modeling bugs. EPA issued final approval of EMFAC2021 model for regional conformity use with a two-year grace period on November 15, 2022. On April 10, 2023, CARB submitted a request for the use of EMFAC2021 interim off-model adjustment factors that account for the emission benefits of California’s Heavy-Duty Vehicle Inspection and Maintenance Program (HD I/M) in transportation conformity determinations. On May 26, 2023, EPA approved the use of these factors in regional conformity analyses in California.

A transportation data template and detailed EMFAC modeling instructions have been prepared to summarize the transportation model output for use in EMFAC2021. The template includes allocating VMT by speed bin by hour of the day. EMFAC2021 was used to estimate exhaust emissions for ozone, PM-10, and PM2.5 conformity demonstrations consistent with the applicable air quality plan. A conformity post-processing template has been developed to process EMFAC output and to incorporate HD I/M program adjustment factors. Note that the statewide SIP measures documented in Chapter 2 are already incorporated in the EMFAC2021 model as appropriate.

B. ADDITIONAL PM-10 ESTIMATES

PM-10 emissions for re-entrained dust from travel on paved and unpaved roads will be calculated separately from roadway construction emissions. It is important to note that with the final approval of the 2007 PM-10 Maintenance Plan, EPA approved a methodology to calculate PM-10 emissions from paved and unpaved roads in future San Joaquin Valley conformity determinations. The Conformity Analysis uses these methodologies and estimates construction-related PM-10 emissions consistent with the 2007 PM-10 Maintenance Plan. The National Ambient Air Quality Standards for PM-10 consists of a 24-hour standard, which is represented by the motor vehicle emissions budgets established in the 2007 PM-10 Maintenance Plan. It is important to note that EPA revoked the annual PM-10 Standard on October 17, 2006. The PM-10 emissions calculated for the conformity analysis represent emissions on an annual average day and are used to satisfy the budget test.

CALCULATION OF REENTRAINED DUST FROM PAVED ROAD TRAVEL

On January 13, 2011 EPA released a new method for estimating re-entrained road dust emissions from cars, trucks, buses, and motorcycles on paved roads. On February 4, 2011, EPA published the *Official Release of the January 2011 AP-42 Method for Estimating Re-Entrained Road Dust from Paved Roads* approving the January 2011 method for use in regional emissions analysis and beginning a two year conformity grace period, after which use of the January 2011 AP-42 method is required (e.g. February 4, 2013) in regional conformity analyses.

The road dust calculations have been updated to reflect this new methodology. More specifically, the emission factor equation and k value (particle size multiplier) have been updated accordingly. CARB default assumptions for roadway silt loading by roadway class, average vehicle weight, and rainfall correction factor remain unchanged. Emissions are estimated for five roadway classes including freeways, arterials, collectors, local roads, and rural roads. Countywide VMT information is used for each road class to prepare the emission estimates.

CALCULATION OF REENTRAINED DUST FROM UNPAVED ROAD TRAVEL

The base methodology for estimating unpaved road dust emissions is based on a CARB methodology in which the miles of unpaved road are multiplied by the assumed VMT and an emission factor. In the 2007 PM-10 Maintenance Plan, it is assumed that all non-agricultural unpaved roads within the San Joaquin Valley receive 10 vehicle passes per day. An emission factor of 2.0 lbs PM-10/VMT is used for the unpaved road dust emission estimates. Emissions are estimated for city/county maintained roads.

CALCULATION OF PM-10 FROM ROADWAY CONSTRUCTION

Section 93.122(e) of the Transportation Conformity regulation requires that PM-10 from construction-related fugitive dust be included in the regional PM-10 emissions analysis, if it is identified as a contributor to the nonattainment problem in the PM-10 implementation plan. The emission estimates are based on a CARB methodology in which the miles of new road built are converted to acres disturbed, which is then multiplied by a generic project duration (i.e., 18 months) and an emission rate. Emission factors are unchanged from the previous estimates at 0.11 tons PM-10/acre-month of activity. The emission factor includes the effects of typical control measures, such as watering, which is assumed to reduce emissions by about 50%. Updated activity data (i.e., new lane miles of roadway built) is estimated based on the highway and transit construction projects in the TIP/RTP.

PM-10 TRADING MECHANISM

The PM-10 SIP allows trading from the motor vehicle emissions budget for the PM-10 precursor NO_x to the motor vehicle emissions budget for primary PM-10 using a 1.5 to 1 ratio. The trading mechanism will be used only for conformity analyses for analysis years after 2005.

C. PM2.5 APPROACH

EPA and FHWA have indicated that areas violating both the annual and 24-hour standards for PM2.5 must address all standards in the conformity determination. The San Joaquin Valley currently violates both the 1997 and 2012 annual PM2.5 standards, and the 1997 and 2006 24-hour PM2.5 standards; thus this conformity determination includes analyses to all PM2.5 standards.

The following PM2.5 approach addresses the 1997 (annual and 24-hour), the 2012 (annual, moderate and serious), and the 2006 (24-hour) standards.

EMFAC2021 incorporates data for temperature and relative humidity that vary by geographic area, calendar year and season. The annual average represents an average of all the monthly inventories. A winter average represents an average of the California winter season (October through February). EMFAC will be run to estimate direct PM2.5 and NOx emissions from motor vehicles for an annual or winter average day as described below.

EPA guidance indicates that State and local agencies need to consider whether VMT varies during the year enough to affect PM2.5 annual emission estimates. The availability of seasonal or monthly VMT data and the corresponding variability of that data need to be evaluated.

PM2.5 areas that are currently using network-based travel models must continue to use them when calculating annual emission inventories. The guidance indicates that the interagency consultation process should be used to determine the appropriate approach to produce accurate annual inventories for a given nonattainment area. Whichever approach is chosen, that approach should be used consistently throughout the analysis for a given pollutant or precursor. The interagency consultation process should also be used to determine whether significant seasonal variations in the output of network-based travel models are expected and whether these variations would have a significant impact on PM2.5 emission estimates.

The SJV MPOs use network-based travel models. However, the models only estimate average weekday VMT. The SJV MPOs do not have the data or ability to estimate seasonal variation at this time. Data collection and analysis for some studies are in the preliminary phases and cannot be relied upon for other analyses. Some statewide data for the seasonal variation of VMT on freeways does exist. However, traffic patterns on freeways do not necessarily represent the typical traffic pattern for local streets and arterials. In many cases, traffic counts are sponsored by the MPOs and conducted by local jurisdictions. While some local jurisdictions may collect weekend or seasonal data, typical urban traffic counts occur on weekdays (Tuesday through Thursday). Data collection must be more consistent in order to begin estimation of daily or seasonal variation. The SJV MPOs believe that the average annual day calculated from the current traffic models and EMFAC2021 represent the most accurate VMT data available. The MPOs will continue to discuss and research options that look at how VMT varies by month and season according to the local traffic models.

It is important to note that the guidance indicates that EPA expects the most thorough analysis for developing annual inventories will occur during the development of the SIP, taking into account the needs and capabilities of air quality modeling tools and the limitations of available data. Prior to the development of the SIP, State and local air quality and transportation agencies may decide to use simplified methods for regional conformity analyses.

The regional emissions analyses in PM_{2.5} nonattainment areas must consider directly emitted PM_{2.5} motor vehicle emissions from tailpipe, brake wear, and tire wear. In California, areas will use the latest version of EMFAC emissions modeling software. As indicated under the Conformity Test Requirements, re-entrained road dust and construction-related fugitive dust from highway or transit projects is not included at this time. In addition, NO_x emissions are included; however, VOC, SO_x, and ammonia emissions are not.

1997 24-Hour and Annual Standards – The portions of the 2018 PM_{2.5} Plan dealing with the 1997 24-hour standard were approved by EPA on January 28, 2022 (effective February 28, 2022) and contain motor vehicle emission budgets for PM_{2.5} and NO_x established based on daily average emissions. The 1997 annual PM_{2.5} transportation conformity budgets for annual average PM_{2.5} and NO_x emissions were approved by EPA on December 14, 2023 (effective January 16, 2024). The annual inventory methodology contained in the 2018 PM_{2.5} Plan was used to establish emissions budgets is consistent with the methodology used herein. The motor vehicle emissions budget for PM_{2.5} includes directly emitted PM_{2.5} motor vehicle emissions from tailpipe, brake wear and tire wear. VOC, SO_x, ammonia, and dust (from paved roads, unpaved roads, and road construction) were found to be insignificant and not included in the motor vehicle emission budgets for conformity purposes.

2006 24-Hour Standard – On March 27, 2020, EPA proposed approval of portions of the 2018 PM_{2.5} Plan that pertain to the 2006 24-hour PM_{2.5} standard, including granting attainment deadline extension to 2024. This portion of the 2018 PM_{2.5} Plan was finalized on July 22, 2020, effective as of publication. The 2018 PM_{2.5} Plan contains motor vehicle emission budgets for PM_{2.5} and NO_x established based on average winter daily emissions. The winter inventory methodology contained in the 2018 PM_{2.5} Plan and used to establish emissions budgets is consistent with the methodology used herein. The motor vehicle emissions budget for PM_{2.5} include directly emitted PM_{2.5} motor vehicle emissions from tailpipe, brake wear and tire wear. VOC, SO_x, ammonia, and dust (from paved roads, unpaved roads, and road construction) were found to be insignificant and not included in the motor vehicle emission budgets for conformity purposes.

2012 Annual Standard - On November 26, 2021, EPA issued final approval of the 2016 Moderate Area PM_{2.5} Plan and the portions of the 2018 PM_{2.5} plan that pertain to the moderate requirements for the 2012 PM_{2.5} standard. The approval also included reclassification to serious. Note that CARB withdrew 2018 PM_{2.5} Plan portions dealing with 2012 serious PM_{2.5} standards on October 27, 2022. Until the new 2012 serious area PM_{2.5} standard budgets are found adequate or approved, the SJV will conduct conformity determination for the 2012 annual PM_{2.5} standard using budgets established in the 2016 PM_{2.5} and 2018 PM_{2.5} Plan for moderate nonattainment. The 2018 PM_{2.5} Plan contains motor vehicle emission budgets for PM_{2.5} and NO_x established based on average annual daily emissions. The annual inventory methodology contained in the 2018 PM_{2.5} Plan and used to establish emissions budgets is consistent with the methodology used herein. The motor vehicle emissions budget for PM_{2.5} include directly emitted PM_{2.5} motor vehicle emissions from tailpipe, brake wear and tire wear. VOC, SO_x, ammonia, and dust (from paved roads, unpaved roads, and road construction) were found to be insignificant and not included in the motor vehicle emission budgets for conformity purposes.

1997 AND 2012 ANNUAL PM2.5 TRADING MECHANISM

The 2018 PM2.5 Plan budgets and trading mechanism will also be used in this conformity analysis for moderate and serious 2012 PM2.5 and serious 1997 PM2.5 standards, as needed. The 2016 PM2.5 Plan and 2018 PM2.5 Plan allows trading for 2012 PM2.5 from the motor vehicle emissions budget for the PM2.5 precursor NOx to the motor vehicle emissions budget for primary annual PM2.5 using a 6.5 to 1 ratio. This trading mechanism will be used for the 1997 and 2012 annual PM2.5 standard conformity analysis, as needed.

2006 AND 1997 24-HOUR PM2.5 TRADING MECHANISM

On July 22, 2020, EPA partially approved the 2018 PM2.5 SIP including the 2006 PM2.5 standard trading mechanism that allows trading from the motor vehicle emissions budget for the PM2.5 precursor NOx to the motor vehicle emissions budget for primary PM-2.5 using a 2 to 1 ratio. Then on January 28, 2022, EPA approved 1997 24-hour PM2.5 SIP elements contained in the 2018 PM2.5 Plan, inclusive of the inter-pollutant trading mechanism with the same 2 to 1 ratio. This trading mechanism will be used for the 2006 and 2012 24-hour PM2.5 standard conformity analysis, as needed.

D. SUMMARY OF PROCEDURES FOR REGIONAL EMISSIONS ESTIMATES

New step-by-step air quality modeling instructions were developed for SJV MPO use with EMFAC2021. These instructions were last updated in March of 2024 (HD I/M adjustments were included in conformity post processing templates as of November 2023).

Documentation of the Conformity Analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 is provided in Appendix C, including:

- 2025 FTIP Conformity EMFAC Spreadsheet
- 2025 FTIP Conformity Paved Road Spreadsheet
- 2025 FTIP Conformity Unpaved Road Dust Spreadsheet
- 2025 FTIP Conformity Construction Spreadsheet
- 2025 FTIP Conformity Totals Spreadsheet
- 2025 FTIP Conformity PM10 Trading Spreadsheet

CHAPTER 4: TRANSPORTATION CONTROL MEASURES

This chapter provides an update of the current status of transportation control measures identified in applicable implementation plans. Requirements of the Transportation Conformity regulation relating to transportation control measures (TCMs) are presented first, followed by a review of the applicable air quality implementation plans and TCM findings for the TIP/RTP.

A. TRANSPORTATION CONFORMITY REGULATION REQUIREMENTS FOR TCMS

The Transportation Conformity regulation requires that the TIP/RTP “must provide for the timely implementation of TCMs in the applicable implementation plan.” The Federal definition for the term “transportation control measure” is provided in 40 CFR 93.101:

“any measure that is specifically identified and committed to in the applicable implementation plan that is either one of the types listed in Section 108 of the CAA [Clean Air Act], or any other measure for the purpose of reducing emissions or concentrations of air pollutants from transportation sources by reducing vehicle use or changing traffic flow or congestion conditions. Notwithstanding the first sentence of this definition, vehicle technology based, fuel-based, and maintenance-based measures which control the emissions from vehicles under fixed traffic conditions are not TCMs for the purposes of this subpart.”

In the Transportation Conformity regulation, the definition provided for the term “applicable implementation plan” is:

“Applicable implementation plan is defined in section 302(q) of the CAA and means the portion (or portions) of the implementation plan, or most recent revision thereof, which has been approved under section 110, or promulgated under section 110(c), or promulgated or approved pursuant to regulations promulgated under section 301(d) and which implements the relevant requirements of the CAA.”

Section 108(f)(1) of the Clean Air Act as amended in 1990 lists the following transportation control measures and technology-based measures:

- (i) programs for improved public transit;
- (ii) restriction of certain roads or lanes to, or construction of such roads or lanes for use by, passenger buses or high occupancy vehicles;
- (iii) employer-based transportation management plans, including incentives;
- (iv) trip-reduction ordinances;
- (v) traffic flow improvement programs that achieve emission reductions;

- (vi) fringe and transportation corridor parking facilities serving multiple occupancy vehicle programs or transit service;
- (vii) programs to limit or restrict vehicle use in downtown areas or other areas of emission concentration particularly during periods of peak use;
- (viii) programs for the provision of all forms of high-occupancy, shared-ride services;
- (ix) programs to limit portions of road surfaces or certain sections of the metropolitan area to the use of non-motorized vehicles or pedestrian use, both as to time and place;
- (x) programs for secure bicycle storage facilities and other facilities, including bicycle lanes, for the convenience and protection of bicyclists, in both public and private areas;
- (xi) programs to control extended idling of vehicles;
- (xii) programs to reduce motor vehicle emissions, consistent with title II, which are caused by extreme cold start conditions;
- (xiii) employer-sponsored programs to permit flexible work schedules;
- (xiv) programs and ordinances to facilitate non-automobile travel, provision and utilization of mass transit, and to generally reduce the need for single occupant vehicle travel, as part of transportation planning and development efforts of a locality, including programs and ordinances applicable to new shopping centers, special events, and other centers of vehicle activity;
- (xv) programs for new construction and major reconstructions of paths, tracks or areas solely for the use by pedestrian or other non-motorized means of transportation when economically feasible and in the public interest. For purposes of this clause, the Administrator shall also consult with the Secretary of the Interior; and
- (xvi) program to encourage the voluntary removal from use and the marketplace of pre-1980 model year light duty vehicles and pre-1980 model light duty trucks.

TCM REQUIREMENTS FOR A TRANSPORTATION PLAN

The EPA regulations in 40 CFR 93.113(b) indicate that transportation control measure requirements for transportation plans are satisfied if two criteria are met:

“(1) The transportation plan, in describing the envisioned future transportation system, provides for the timely completion or implementation of all TCMs in the applicable implementation plan which are eligible for funding under Title 23 U.S.C. or the Federal Transit Laws, consistent with schedules included in the applicable implementation plan.

(2) Nothing in the transportation plan interferes with the implementation of any TCM in the applicable implementation plan.”

TCM REQUIREMENTS FOR A TRANSPORTATION IMPROVEMENT PROGRAM

Similarly, in 40 CFR Section 93.113(c), EPA specifies three TCM criteria applicable to a transportation improvement program:

“(1) An examination of the specific steps and funding source(s) needed to fully implement each TCM indicates that TCMs which are eligible for funding under title 23 U.S.C. or the Federal Transit Laws are on or ahead of the schedule established in the applicable implementation plan, or, if such TCMs are behind the schedule established in the applicable implementation plan, the MPO and DOT have determined that past obstacles to implementation of the TCMs have been identified and have been or are being overcome, and that all State and local agencies with influence over approvals or funding for TCMs are giving maximum priority to approval or funding of TCMs over other projects within their control, including projects in locations outside the nonattainment or maintenance area;

(2) If TCMs in the applicable implementation plan have previously been programmed for Federal funding but the funds have not been obligated and the TCMs are behind the schedule in the implementation plan, then the TIP cannot be found to conform:

- if the funds intended for those TCMs are reallocated to projects in the TIP other than TCMs, or
- if there are no other TCMs in the TIP, if the funds are reallocated to projects in the TIP other than projects which are eligible for Federal funding intended for air quality improvement projects, e.g., the Congestion Mitigation and Air Quality Improvement Program;

(3) Nothing in the TIP may interfere with the implementation of any TCM in the applicable implementation plan.”

B. APPLICABLE AIR QUALITY IMPLEMENTATION PLANS

Only transportation control measures from applicable implementation plans for the San Joaquin Valley region are required to be updated for this analysis. For this conformity analysis, the applicable implementation plans, according to the definition provided at the start of this chapter, are summarized below.

APPLICABLE IMPLEMENTATION PLAN FOR OZONE

The 2016 Ozone Plan does not include new TCMs for the San Joaquin Valley.

APPLICABLE IMPLEMENTATION PLAN FOR PM-10

The 2007 PM-10 Maintenance Plan (as revised in 2015) was approved by EPA on July 8, 2016 (effective September 30, 2016). No new local agency control measures were included in the Plan.

The Amended 2003 PM-10 Plan was approved by EPA on May 26, 2004 (effective June 25, 2004). A local government control measure assessment was completed for this plan. The analysis focused on transportation-related fugitive dust emissions, which are not TCMs by definition. The local government commitments are included in the *Regional Transportation Planning Agency Commitments for Implementation Document, April 2003*.

However, the *Amended 2002 and 2005 Ozone Rate of Progress Plan* contains commitments that reduce ozone related emissions; these measures are documented in the *Regional Transportation Planning Agency Commitments for Implementation Document, April 2002*. These commitments are included by reference in the Amended 2003 PM-10 Plan to provide emission reductions for precursor gases and help to address the secondary particulate problem. Since these commitments are included in the Plan by reference, the commitments were approved by EPA as TCMs.

APPLICABLE IMPLEMENTATION PLAN FOR PM2.5

The 2016 and 2018 PM2.5 Plans do not include any additional TCMs for the San Joaquin Valley.

C. IDENTIFICATION OF 2002 RACM THAT REQUIRE TIMELY IMPLEMENTATION DOCUMENTATION

As part of the 2004 Conformity Determination, FHWA requested that each SIP (Reasonably Available Control Measure - RACM) commitment containing federal transportation funding and a transportation project and schedule be addressed more specifically. FHWA verbally requested documentation that the funds were obligated and the project was implemented as committed to in the SIP.

The RTPA Commitment Documents, Volumes One and Two, dated April 2002 (Ozone RACM) were reviewed, using a “Summary of Commitments” table. Commitments that contain specific Federal funding/transportation projects/schedules were identified for further documentation. In some cases, local jurisdictions used the same Federal funding/transportation projects/schedules for various measures; these were identified as combined with (“comb w/”) reference as appropriate. A not applicable (“NA”) was noted where federally-funded project is vehicle technology based, fuel based, and maintenance based measures (e.g., LEV program, retrofit programs, clean fuels - CNG buses, etc.).

In addition, the RTPA Commitment Document, Volume Three, dated April 2003 (PM-10 BACM) was reviewed, using the Summary of Commitments table. Commitments that contain specific Congestion Mitigation and Air Quality (CMAQ) funding for the purchase and/or operation of street sweeping equipment have been identified. Only one commitment (Fresno - City of Reedley) was identified.

The Project TID Table was developed to provide implementation documentation necessary for the measures identified. Detailed information is summarized in the first five columns, including the commitment number, agency, description, funding and schedule (if applicable).

For each project listed, the TIP in which the project was programmed, as well as the project ID and description have been provided. In addition, the current implementation status of the project has been included (e.g., complete, under construction, etc). MPO staff determined this information in consultation with the appropriate local jurisdiction. Any projects not implemented according to schedule or project changes are explained in the project status column. These explanations are consistent with the guidance and regulations provided in the Transportation Conformity regulation.

Supplemental documentation was provided to FHWA in August and September 2004 in response to requests for information on timely implementation of TCMs in the San Joaquin Valley. The supplemental documentation included the approach, summary of interagency consultation correspondence, and three tables completed by each of the eight MPOs. The Supplemental Documentation was subsequently approved by FHWA as part of the 2004 Conformity Determination.

The Project TID table that was prepared at the request of FHWA for the 2004 Conformity Analysis, has been updated in each subsequent conformity analysis. This documentation has been updated as part of this Conformity Analysis. A summary of this information is provided in Appendix D.

In March 2005, the SJV MPOs began interagency consultation with FHWA and EPA to address outstanding RACM/TCM issues. In general, criteria were developed to identify commitments that require timely implementation documentation. The criteria were applied to the 2002 RACM Commitments approved by reference as part of the Amended 2003 PM-10 Plan. In April 2006, EPA transmitted final tables that identified the approved RACM commitments that require timely implementation documentation for the Conformity Analysis. Subsequently, an approach to provide timely implementation documentation was developed in consultation with FHWA.

A new 2002 RACM TID Table was prepared in 2006 to address the more general RACM commitments that require additional timely implementation documentation per EPA. A brief summary of the commitment, including finite end dates if applicable, is included for each measure. The MPOs provided a status update regarding implementation in consultation with their member jurisdictions. If a specific project has been implemented, it is included in the Project TID Table under “Additional Projects Identified”. This documentation was included in the Conformity Analysis for the 2007 TIP and 2004 RTP (as amended) that was approved by FHWA in October 2006.

On March 26, 2020, the Fresno Council of Governments has submitted a request to substitute a traffic signal(s) project located in the City of Huron with a signal synchronization (ITS) project in the City of Clovis. The proposed substitution is consistent with federal and state requirements, including the federal planning requirements and the Transportation Conformity Rule. On August 19, 2021, EPA approved the TCM substitution.

In April of 2022, a new local TCM RACM analysis was conducted as part of 2022 Ozone SIP development. This analysis has then been revised to meet PM2.5 SIP BACM requirements in 2023 and again in 2024, as part of 2012 annual PM2.5 standard attainment deadline extension request. However, the revised TCM listing has not yet been approved by EPA; therefore, 2022 RACM TID still applies to this Conformity Analysis. The 2002 RACM TID Table has been updated as part of this Conformity Analysis. A summary of this information is provided in Appendix D.

D. TCM FINDINGS FOR THE TIP AND REGIONAL TRANSPORTATION PLAN

Based on a review of the transportation control measures contained in the applicable air quality plans, as documented in the two tables contained in Appendix D, the required TCM conformity findings are made below:

The TIP/RTP provide for the timely completion or implementation of the TCMs in the applicable air quality plans. In addition, nothing in the TIP or RTP interferes with the implementation of any TCM in the applicable implementation plan, and priority is given to TCMs.

E. RTP CONTROL MEASURE ANALYSIS IN SUPPORT OF 2003 PM-10 PLAN

In May 2003, the San Joaquin Valley MPO Executive Directors committed to conduct feasibility analyses as part of each new RTP in support of the 2003 PM-10 Plan. This commitment was retained in the 2007 PM-10 Maintenance Plan. In accordance with this commitment, Fresno Council of Governments undertook a process to identify and evaluate potential control measures that could be included in the 2022 RTP. The analysis of additional measures included verification of the feasibility of the measures in the PM-10 Plan BACM analysis, as well as an analysis of new PM-10 commitments from other PM-10 nonattainment areas.

A summary of the process to identify potential long-range control measures analysis and results to be evaluated as part of the RTP development was transmitted to the Interagency Consultation (IAC) partners for review. FHWA and EPA concurred with the summary of the long-range control measure approach in September 2009.

The Local Government Control Measures considered in the PM-10 Plan BACM analysis that were considered for inclusion in the 2022 RTP included:

- Paving or Stabilizing Unpaved Roads and Alleys
- Curbing, Paving, or Stabilizing Shoulders on Paved Roads
- Frequent Routine Sweeping or Cleaning of Paved Roads (i.e., funding allocation for the purchase of PM-10 efficient street sweepers for member jurisdictions)
- Repave or Overlay Paved Roads with Rubberized Asphalt

It is important to note that the first three measures considered in the PM-10 Plan BACM analysis (i.e., access points, street cleaning requirements, and erosion clean up) are not applicable for inclusion in the RTP.

With the adoption of each new RTP, the MPOs will consider the feasibility of these measures, as well as identify any other new PM-10 measures that would be relevant to the San Joaquin Valley. Fresno Council of Governments also considered PM-10 commitments from other PM-10

nonattainment areas that had been developed since the previous RTP was approved. Federal websites were reviewed for any PM-10 plans that have been approved since 2016. New PM-10 plans that have been reviewed include:

- A. Owens Valley, CA Serious PM-10 Nonattainment Area SIP, submitted June 9, 2016 (EPA approval effective April 12, 2017). Road dust was determined to be below de minimis thresholds and no mobile source control measures were adopted.
- B. Juneau's Mendenhall Valley, AK PM-10 Limited Maintenance Plan submitted July 22, 2020 (EPA approval effective November 24, 2021). The maintenance plan control measures included optimizing sanding and de-icing materials to minimize entrainment, spring street sweeping, and paving of dirt roads. No additional measures were identified for the LMP to continue attainment of the NAAQS. Contingency measures include paving of dirt roads and stabilization of unpaved shoulders.
- C. Wallula, WA Second PM-10 Maintenance Plan submitted November 22, 2019 (EPA approval effective June 1, 2020). The plan relies on fugitive dust controls from livestock operations.
- D. Eagle River, AK PM-10 Nonattainment Plan submitted on November 10, 2020 (EPA approval effective December 9, 2021) The plan control measures include paving gravel roads with recycle asphalt product.
- E. Pinehurst, ID PM-10 Limited Maintenance Plan submitted September 29, 2017 (EPA approval effective October 11, 2018). The plan primarily relies on control strategies for residential wood smoke. No additional PM-10 dust measures are included.

Based on review of commitments from other PM-10 nonattainment areas that have been developed since the previous RTP, no additional on-road fugitive dust controls measures are available for consideration.

Based on consultation with CARB and the Air District, Fresno Council of Governments considered priority funding allocations in the 2022 RTP for PM-10 and NO_x emission reduction projects in the post-attainment year timeframe that go beyond the emission reduction commitments made for the attainment year 2010 for the following four measures:

- (1) Paving or Stabilizing Unpaved Roads and Alleys
- (2) Curbing, Paving, or Stabilizing Shoulders on Paved Roads
- (3) Frequent Routine Sweeping or Cleaning of Paved Roads (i.e., funding allocation for the purchase of PM-10 efficient street sweepers for member jurisdictions); and
- (4) Repave or Overlay Paved Roads with Rubberized Asphalt

Fresno Council of Governments continues to actively include the reduction of PM_{2.5/10} emissions (typical projects above list #1 through #3) in the Congestion Mitigation and Air Quality (CMAQ)

Improvement Program. PM_{2.5/10} is included in the “Project Category Goals”. PM_{2.5/10} is evaluated and prioritized in the CMAQ Scoring Criteria under the “Air Pollutant Emission Reduction” Category (20 points possible out of 100) as well as receiving consideration in the “Subjective Evaluation” (10 points possible out of 100). PM_{2.5/10} projects also are given priority if they meet the criteria of being cost-effective (30 points out of 100) Information regarding Fresno Council of Governments CMAQ Program can be found at: <http://www.fresnocog.org/>.

Fresno Council of Governments has explored the feasibility of incorporating the use of rubberized asphalt in repave or overlay projects. Currently, California Department of Transportation (Caltrans) incorporates rubberized asphalt as general policy to meet recycled content requirements on high volume state highway facilities. Caltrans is required by AB 338 (Levine) to incrementally phase in increased use of rubberized-asphalt concrete (RAC) not less than 25% by ton after January 1, 2010, and not less than 35% by ton after January 1, 2013. Caltrans (District 6) found that rubberized asphalt is problematic when used where traffic stops and starts (i.e., signalized local streets). The material has been found to break down prematurely and tends to “shove and tear” in stop-and-go traffic applications. Rubberized asphalt has been found to have useful applications for noise reduction purposes. There is work currently in process to develop commercial viability of low greenhouse gas Portland Cement Concrete which may be preferable to rubberized asphalt for greenhouse gas reduction.

The application of rubberized asphalt technology can reduce tire wear dust (PM₁₀). The cost effectiveness for roads with annual daily traffic of 2,500 vehicles per lane mile per day is estimated at \$4,290,000 per ton. (Analysis of Particulate Control Measures Effectiveness Interim Report #2, Sierra Research, February 15, 2007; Maricopa, Arizona, Association of Governments). The limitations imposed by the high cost and limited applicability to free-flowing high volume highway use prove to make this of limited application on local streets in the Fresno region. Rubberized asphalt is incorporated in transportation projects where it is feasible. Fresno Council of Governments will continue to explore the feasibility of new technology in the reduction of transportation sources of air pollutant emissions.

CHAPTER 5: INTERAGENCY CONSULTATION

The requirements for consultation procedures are listed in the Transportation Conformity Regulations under section 93.105. Consultation is necessary to ensure communication and coordination among air and transportation agencies at the local, State and Federal levels on issues that would affect the conformity analysis such as the underlying assumptions and methodologies used to prepare the analysis. Section 93.105 of the conformity regulation notes that there is a requirement to develop a conformity SIP that includes procedures for interagency consultation, resolution of conflicts, and public consultation as described in paragraphs (a) through (e). Section 93.105(a)(2) states that prior to EPA approval of the conformity SIP, “MPOs and State departments of transportation must provide reasonable opportunity for consultation with State air agencies, local air quality and transportation agencies, DOT and EPA, including consultation on the issues described in paragraph (c)(1) of this section, before making conformity determinations.” The Air District adopted Rule 9120 Transportation Conformity on January 19, 1995 in response to requirements in Section 176(c)(4)(c) of the Clean Air Act as amended in 1990. Since EPA has not approved Rule 9120 (the conformity SIP), the conformity regulation requires compliance with 40 CFR 93.105 (a)(2) and (e) and 23 CFR 450.

Section 93.112 of the conformity regulation requires documentation of the interagency and public consultation requirements according to Section 93.105. A summary of the interagency consultation and public consultation conducted to comply with these requirements is provided below. Appendix E includes the public meeting process documentation. The responses to comments received as part of the public comment process are included in Appendix F.

A. INTERAGENCY CONSULTATION

Consultation is generally conducted through the San Joaquin Valley Interagency Consultation Group (combination of previous Model Coordinating Committee and Programming Coordinating Group). The San Joaquin Valley Interagency Consultation (IAC) Group has been established by the Valley Transportation Planning Agency's Director's Association to provide a coordinated approach to valley transportation planning and programming (Transportation Improvement Program, Regional Transportation Plan, and Amendments), transportation conformity, climate change, and air quality (State Implementation Plan and Rules). The purpose of the group is to ensure Valley wide coordination, communication, and compliance with Federal and California Transportation Planning and Clean Air Act requirements. Each of the eight Valley MPOs and the Air District are represented. In addition, the Federal Highway Administration, Federal Transit Administration, the Environmental Protection Agency, the California Air Resources Board and Caltrans (Headquarters, District 6, and District 10) are all represented. The IAC Group meets approximately quarterly.

The draft boilerplate conformity document was distributed for interagency consultation on April 8, 2024. EPA and FHWA have provided their concurrence. Comments received have been addressed and incorporated into this version of the analysis.

The Conformity Analysis for the 2025 FTIP and 2022 RTP Amendment No. 4 was developed in consultation with Fresno Council of Governments local partner agencies, including member jurisdictions, Caltrans, and local transit agencies.

The 2025 FTIP, 2022 RTP Amendment No. 4, and the corresponding conformity analysis were released on May 1, 2024 for a 30-day public comment period, followed by adoption on July 25, 2024. Federal approval is anticipated on or before December 31, 2024.

Transportation planning is a collaborative process and includes visioning, forecasting population/employment, projecting future land use in conjunction with local jurisdictions, assessing needs, developing capital and operating strategies to move people and goods, and developing a financial plan. Consistent with SB 375 and Title 23 CFR Part 450.316, Fresno Council of Governments planning processes are designed to foster involvement by all interested parties, such as walking and bicycling representatives, transportation providers, appropriate federal, state, and local agencies, public health departments and advocates, housing advocates, community groups, environmental advocates, building industry representatives, broad-based business organizations, landowners, the Native American community, neighboring MPOs, and the general public through a proactive public participation process. The 2017 Regional Transportation Plan Guidelines for MPOs states that “coordination is the cooperative development of plans, programs and schedules among agencies and entities with legal standing to achieve general consistency. Consultation means that one or more parties confer with other identified parties in accordance with the established process and, prior to taking action(s), considers the views of the other parties and periodically informs them about action(s) taken. It is very important for the development of the RTP to be conducted both in coordination and consultation with interested parties.”

B. PUBLIC CONSULTATION

In general, agencies making conformity determinations shall establish a proactive public involvement process that provides opportunity for public review and comment on a conformity determination for FTIPs/RTPs. In addition, all public comments must be addressed in writing.

All MPOs in the San Joaquin Valley have standard public involvement procedures. Fresno Council of Governments has an adopted consultation process and policy for conformity analysis which includes a minimum 30-day public notice and comment period followed by a public hearing. A public meeting is also conducted prior to adoption and all public comments are responded to in writing. The Appendices contain corresponding documentation supporting the public involvement procedures.

CHAPTER 6: TIP AND RTP CONFORMITY

The principal requirements of the transportation conformity regulation for TIP/RTP assessments are: (1) the TIP and RTP must pass an emissions budget test with a budget that has been found to be adequate by EPA for transportation conformity purposes, or an interim emission test; (2) the latest planning assumptions and emission models must be employed; (3) the TIP and RTP must provide for the timely implementation of transportation control measures (TCMs) specified in the applicable air quality implementation plans; and (4) consultation. The final determination of conformity for the TIP/RTP is the responsibility of the Federal Highway Administration and the Federal Transit Administration.

The previous chapters and the appendices present the documentation for all of the requirements listed above for conformity determinations except for the conformity test results. Prior chapters have also addressed the updated documentation required under the transportation conformity regulation for the latest planning assumptions and the implementation of transportation control measures specified in the applicable air quality implementation plans.

This chapter presents the results of the conformity tests, satisfying the remaining requirement of the transportation conformity regulation. Separate tests were conducted for ozone, PM-10 and PM2.5 (1997 and 2012 PM2.5 standards, and 2006 24-hour PM2.5 standards). The applicable conformity tests were reviewed in Chapter 1. For each test, the required emissions estimates were developed using the transportation and emission modeling approaches required under the transportation conformity regulation and summarized in Chapters 2 and 3. The results are summarized below, followed by a more detailed discussion of the findings for each pollutant. Table 6-1 presents results for ozone (ROG/NO_x), PM-10 (PM-10/NO_x), and PM2.5 (PM2.5/NO_x) respectively, in tons per day for each of the horizon years tested.

Ozone:

For 2008 and 2015 8-hour ozone, the applicable conformity test is the emissions budget test, using the *2018 Updates to the California State Implementation Plan* budgets for the San Joaquin Valley established for ROG and NO_x for an average summer (ozone) season day. EPA approved the plan and the budgets on March 25, 2019. The modeling results for all analysis years indicate that the on-road vehicle ROG and NO_x emissions predicted for each of the “Build” scenarios are less than the emissions budgets. The TIP/RTP therefore satisfy the conformity emissions test for volatile organic compounds and nitrogen oxides.

PM-10:

For PM-10, the applicable conformity test is the emissions budget test, using the 2007 PM-10 Maintenance Plan budgets for PM-10 and NO_x. This Plan revision including conformity budgets was conditionally approved by EPA on July 8, 2016 (effective September 30, 2016). On January

20, 2023, CARB withdrew their 2017 PM10 Maintenance Plan Update addressing the conditional approval of the 2015 Transportation Conformity Budget Update for the annual PM10 standard dealing with exceptional events demonstration. However, since EPA has not yet taken action on this submittal, the 2007 Maintenance Plan budgets (as revised in 2015) continue to apply. The modeling results for all analysis years indicate that the PM-10 emissions predicted for the “Build” scenarios are less than the emissions budget for 2020 using the 2015 SIP Update budgets. The TIP/RTP therefore satisfy the conformity emissions tests for PM-10.

1997 24-Hour and Annual PM2.5 Standards:

For 1997 PM2.5 Standards, the applicable conformity test is the emission budget test, using budgets established in the 2018 PM2.5 Plan. EPA approved 2018 PM2.5 Plan elements pertaining to the 1997 24-hour and 1997 annual PM2.5 standards on January 28, 2022 and December 14, 2024, respectively. The modeling results for all analysis years indicate that the on-road vehicle PM2.5 and NOx emissions predicted for the “Build” scenarios are less than the emissions budget. The TIP/RTP therefore satisfy the conformity emissions test for PM2.5 and nitrogen oxides.

2006 PM2.5 Standard:

On July 22, 2020, EPA approved portions of the 2018 PM2.5 Plan that pertain to the 2006 24-hour PM2.5 standard, including new transportation conformity budgets and trading mechanism. For the 2006 PM2.5 standard, the applicable conformity test is the emission budget test, using approved budgets established in the 2018 PM2.5 Plan. The modeling results for all analysis years indicate that the on-road vehicle PM2.5 and NOx emissions predicted for the “Build” scenarios are less than the emissions budget. The TIP/RTP therefore satisfy the conformity emissions test for PM2.5 and nitrogen oxides.

2012 PM2.5 Standard:

On November 26, 2021, EPA issued final approval of the 2016 Moderate Area PM2.5 Plan and portions of the 2018 PM2.5 plan that pertain to the moderate requirements for the 2012 PM2.5 standard. The approval also included reclassification to serious. CARB withdrew 2018 PM2.5 Plan portions dealing with 2012 serious PM2.5 standards on October 27, 2022. Until the new 2012 serious area PM2.5 standard budgets are found adequate or approved, the SJV will conduct conformity determination for the 2012 annual PM2.5 standard using budgets established in the 2016 PM2.5 and 2018 PM2.5 Plan for moderate nonattainment.

For the 2012 PM2.5 standards, the applicable conformity test is the emissions budget test, using moderate area budgets. The modeling results for all analysis years indicate that the on-road vehicle PM2.5 and NOx emissions predicted for the “Build” scenarios are less than the emissions budget. The TIP/RTP therefore satisfy the conformity emissions test for PM2.5 and nitrogen oxides.

As all requirements of the Transportation Conformity Regulation have been satisfied, a finding of conformity for the 2025 FTIP and the 2022 RTP Amendment No. 4 is supported.

**Table 6-1:
Conformity Results Summary**

2025 FTIP Conformity Analysis Results Summary – Fresno

| Standard | Analysis Year | Emissions Total | | DID YOU PASS? | |
|---------------------|---------------|-----------------|----------------|---------------|-----|
| | | ROG (tons/day) | NOx (tons/day) | ROG | NOx |
| 2008 and 2015 Ozone | 2023 Budget | 5.5 | 14.1 | | |
| | 2025 | 4.7 | 7.5 | YES | YES |
| | 2026 Budget | 4.9 | 13.2 | | |
| | 2026 | 4.4 | 7.1 | YES | YES |
| | 2029 Budget | 4.5 | 12.4 | | |
| | 2029 | 3.9 | 6.1 | YES | YES |
| | 2031 Budget | 4.2 | 12.1 | | |

APPENDIX A

CONFORMITY CHECKLIST

CONFORMITY ANALYSIS DOCUMENTATION

Checklist for MPO TIPs/RTPs January 2018

| 40 CFR | Criteria | Page | Comments |
|---------------------|--|---|----------|
| §93.102 | Document the applicable pollutants and precursors for which EPA designates the area as nonattainment or maintenance. Describe the nonattainment or maintenance area and its boundaries. | Ch. 1 pages 8-10 | |
| §93.102 (b)(2)(iii) | PM10 areas: document whether EPA or state has found VOC and/or NOx to be a significant contributor or if the SIP establishes a budget | Ch. 1 pages 11-12 | |
| §93.102 (b)(2)(iv) | PM2.5 areas: document if both EPA and the state have found that NOx is not a significant contributor or that the SIP does not establish a budget (otherwise, conformity applies for NOx) | Conformity applies to NOx | |
| §93.102(b) (2)(v) | PM2.5 areas: document whether EPA or state has found VOC, SO2, and/or NH3 to be a significant contributor or if the SIP establishes a budget | Ch. 1 page 14 Ch. 3 pages 35-37 | |
| §93.104 (b, c) | Document the date that the MPO officially adopted, accepted or approved the TIP/RTP and made a conformity determination. Include a copy of the MPO resolution. Include the date of the last prior conformity finding made by DOT. | Ch. 5 pages 46-47 Appendix E E.S. page 1 | |
| §93.104 (e) | If the conformity determination is being made to meet the timelines included in this section, document when the new motor vehicle emissions budget was approved or found adequate. | N/A | |
| §93.106 | Document that horizon years are no more than 10 years apart ((a)(1)(i)). Document that the first horizon year is no more than 10 years from the based year used to validate the transportation demand planning model ((a)(1)(ii)). Document that the attainment year is a horizon year, if in the timeframe of the plan ((a)(1)(iii)). Describe the regionally significant additions or modifications to the existing transportation network that are expected to be open to traffic in each analysis year ((a)(2)(ii)). Document that the design concept and scope of projects allows adequate model representation to determine intersections with regionally significant facilities, route options, travel times, transit ridership and land use. | Ch.1 pages 17-18 Table 1-6 Ch.2 page 29 Appendix B Ch.2 pages 24, 25 27, & 29 | |
| §93.108 | Document that the TIP/RTP is fiscally constrained (23 CFR 450). | Appendix B E.S. Page 1 | |

| 40 CFR | Criteria | Page | Comments |
|----------------------|--|---|----------|
| §93.109 (a, b) | Document that the TIP/RTP complies with any applicable conformity requirements of air quality implementation plans (SIPs) and court orders. | Ch. 1-6 pages 8-16 23-31, 32-36, 36-38 | |
| §93.109 (c) | Provide either a table or text description that details, for each pollutant, precursor and applicable standard, whether the interim emissions test(s) and/or the budget test apply for conformity. Indicate which emissions budgets have been found adequate by EPA, and which budgets are currently applicable for what analysis years. | Ch. 1 pages 10-19 Ch, 6 pages 48-52 | |
| §93.109(e) | CO or PM10: Document if the area has a limited maintenance plan and from where that information comes | Ch. 1 pages 12-13 | |
| §93.109(f) | Document if motor vehicle emissions are an insignificant contributor and in what SIP that determination is found | N/A | |
| §93.110 (a, b) | Document the use of latest planning assumptions (source and year) at the “time the conformity analysis begins,” including current and future population, employment, travel and congestion. Document the use of the most recent available vehicle registration data. Document the date upon which the conformity analysis was begun. | Ch. 1 & 2 pages 11-31 | |
| EPA-DOT guidance | Document the use of planning assumptions less than five years old. If unable, include written justification for the use of older data. (December 2008 guidance,) | Ch. 2 pages 20-31 | |
| §93.110 (c,d,e,f) | Document any changes in transit operating policies and assumed ridership levels since the previous conformity determination (c). Document the assumptions about transit service, use of the latest transit fares, and road and bridge tolls (d). Document the use of the latest information on the effectiveness of TCMs and other SIP measures that have been implemented (e). Document the key assumptions and show that they were agreed to through Interagency and public consultation (f). | Ch. 3 pages 26-30 Ch. 5 pages 46-47 | |
| §93.111 | Document the use of the latest emissions model approved by EPA. If the previous model was used and the grace period has ended, document that the analysis began before the end of the grace period. | Ch. 3 page 32 | |
| §93.112 | Document fulfillment of the interagency and public consultation requirements outlined in a specific implementation plan according to §51.390 or, if a SIP revision has not been completed, according to §93.105 and 23 CFR 450. Include documentation of | Ch. 5 pages 46-47 | |

| 40 CFR | Criteria | Page | Comments |
|---|--|--|----------|
| | consultation on conformity tests and methodologies as well as responses to written comments. | | |
| §93.113 | Document timely implementation of all TCMs in approved SIPs. Document that implementation is consistent with schedules in the applicable SIP and document whether anything interferes with timely implementation. Document any delayed TCMs in the applicable SIP and describe the measures being taken to overcome obstacles to implementation. | Appendix D Ch. 4 pages 38-43 | |
| §93.114 | Document that the conformity analyses performed for the TIP is consistent with the analysis performed for the Plan, in accordance with 23 CFR 450.324(f)(2). | Analysis addresses both documents | |
| For Areas with SIP Budgets: | | | |
| §93.118, §93.124 | Document what the applicable budgets are, and for what years. Document if there are subarea budgets established, and for which areas (93.124(c)). Document if there is a safety margin established, and what are the budgets with the safety margin included. (93.124(a)). Document if there has been any trading among budgets, and if so, which SIP establishes the trading mechanism, and how it is used in the conformity analysis (93.124(b)). If there is more than one MPO in the area, document whether separate budgets are established for each MPO (93.124(d)). | Ch. 1 Section D pages 10-16 | |
| §93.118 (a, c, e) | Document that emissions from the transportation network for each applicable pollutant and precursor, including projects in any associated donut area that are in the TIP and regionally significant non-Federal projects, are consistent with any adequate or approved motor vehicle emissions budget for all pollutants and precursors in applicable SIPs. | Ch. 6 Table 6-1 50-52 | |
| §93.118 (b) | Document for which years consistency with motor vehicle emissions budgets must be shown. | Ch. 1 pages 12-18 | |
| §93.118 (d) | Document the use of the appropriate analysis years in the regional emissions analysis for areas with SIP budgets, and the analysis results for these years. Document any interpolation performed to meet tests for years in which specific analysis is not required. | Ch. 1 Table 1-6 pages 16-19 Ch. 6 Table 6-1 pages 50-52 | |
| For Areas without Applicable SIP Budgets: | | | |
| §93.119 | <u>Document whether the area must meet just one or both interim emissions tests. If both, document that it is the “less than” form of these tests (i.e., §93.119(b)(1) and (c)(1) vs. (b)(2), (c)(2), and (d)).</u> | N/A | |

| 40 CFR | Criteria | Page | Comments |
|---|---|------------------------------------|----------|
| §93.119 ⁱ (a, b, c, d) | Document that emissions from the transportation network for each applicable pollutant and precursor, including projects in any associated donut area that are in the TIP and regionally significant non-Federal projects, are consistent with the requirements of the “Action/Baseline” or “Action/Baseline Year” emissions tests as applicable. | N/A | |
| §93.119 (e) | Document the appropriate baseline year. | N/A | |
| §93.119 (f) | Document the use of appropriate pollutants and if EPA or the state has made a finding that a particular precursor or component of PM10 is significant or insignificant. | N/A | |
| §93.119 (g) | Document the use of the appropriate analysis years in the regional emissions analysis for areas without applicable SIP budgets. | N/A | |
| §93.119 (h, i) | Document how the baseline and action scenarios are defined for each analysis year. | N/A | |
| For All Areas Where a Regional Emissions Analysis Is Needed | | | |
| §93.122 (a)(1) | Document that all regionally significant federal and non-Federal projects in the nonattainment/maintenance area are explicitly modeled in the regional emissions analysis. For each project, identify by which analysis year it will be open to traffic. Document that VMT for non-regionally significant Federal projects is accounted for in the regional emissions analysis | Ch. 2 pages 29-31 Appendix B | |
| §93.122 (a)(2, 3) | Document that only emission reduction credits from TCMs on schedule have been included, or that partial credit has been taken for partially implemented TCMs (a)(2). Document that the regional emissions analysis only includes emissions credit for projects, programs, or activities that require regulatory action if: the regulatory action has been adopted; the project, program, activity or a written commitment is included in the SIP; EPA has approved an opt-in to the program, EPA has promulgated the program, or the Clean Air Act requires the program (indicate applicable date). Discuss the implementation status of these programs and the associated emissions credit for each analysis year (a)(3). | Ch. 4 pages 38-45 | |
| §93.122 (a)(4,5,6,7) | For nonregulatory measures that are not included in the transportation plan and TIP, include written commitments from appropriate agencies (a)(4). Document that assumptions for measures outside the transportation system (e.g. fuels measures) are the same for baseline and action scenarios (a)(5). | N/A | |

| 40 CFR | Criteria | Page | Comments |
|-----------------------------------|---|-------------------|----------|
| | Document that factors such as ambient temperature are consistent with those used in the SIP unless modified through interagency consultation (a)(6). Document the method(s) used to estimate VMT on off-network roadways in the analysis (a)(7). | | |
| §93.122 (b)(1)(i) ⁱⁱ | Document that a network-based travel model is in use that is validated against observed counts for a base year no more than 10 years before the date of the conformity determination. Document that the model results have been analyzed for reasonableness and compared to historical trends and explain any significant differences between past trends and forecasts (for per capita vehicle-trips, VMT, trip lengths mode shares, time of day, etc.). | Ch. 2 pages 24-26 | |
| §93.122 (b)(1)(ii) ⁱⁱ | Document the land use, population, employment, and other network-based travel model assumptions. | Ch. 2 pages 21-26 | |
| §93.122 (b)(1)(iii) ⁱⁱ | Document how land use development scenarios are consistent with future transportation system alternatives, and the reasonable distribution of employment and residences for each alternative. | Ch. 2 pages 20-25 | |
| §93.122 (b)(1)(iv) ⁱⁱ | Document use of capacity sensitive assignment methodology and emissions estimates based on a methodology that differentiates between peak and off-peak volumes and speeds, and bases speeds on final assigned volumes. | Ch. 2 pages 23-27 | |
| §93.122 (b)(1)(v) ⁱⁱ | Document the use of zone-to-zone travel impedances to distribute trips in reasonable agreement with the travel times estimated from final assigned traffic volumes. Where transit is a significant factor, document that zone-to-zone travel impedances used to distribute trips are used to model mode split. | Ch. 2 pages 26-28 | |
| §93.122 (b)(1)(vi) ⁱⁱ | Document how travel models are reasonably sensitive to changes in time, cost, and other factors affecting travel choices. | Ch. 2 pages 27-29 | |
| §93.122 (b)(2) ⁱ | Document that reasonable methods were used to estimate traffic speeds and delays in a manner sensitive to the estimated volume of travel on each roadway segment represented in the travel model. | Ch. 2 page 27 | |
| §93.122 (b)(3) ⁱ | Document the use of HPMS, or a locally developed count-based program or procedures that have been chosen through the consultation process, to reconcile and calibrate the network-based travel model estimates of VMT. | Ch. 2 pages 27-29 | |
| §93.122 (d) | In areas not subject to §93.122(b), document the continued use of modeling techniques or the use of appropriate alternative techniques to estimate vehicle miles traveled | Ch. 2 pages 21-22 | |
| §93.122 (e, f) | Document, in areas where a SIP identifies construction-related PM10 or PM2.5 as significant | Ch. 3 page 33-36 | |

| 40 CFR | Criteria | Page | Comments |
|---------------------------|---|--|----------|
| | pollutants, the inclusion of PM10 and/or PM2.5 construction emissions in the conformity analysis. | | |
| §93.122 (g) | If appropriate, document that the conformity determination relies on a previous regional emissions analysis and is consistent with that analysis, i.e. that: | N/A | |
| | (g)(1)(i): the new plan and TIP contain all the projects that must be started to achieve the highway and transit system envisioned by the plan | N/A | |
| | (g)(1)(ii): all plan and TIP projects are included in the transportation plan with design concept and scope adequate to determine their contribution to emissions in the previous determination; | N/A | |
| | (g)(1)(iii): the design concept and scope of each regionally significant project in the new plan/TIP are not significantly different from that described in the previous; | N/A | |
| | (g)(1)(iv): the previous regional emissions analysis meets 93.118 or 93.119 as applicable | N/A | |
| §93.126, §93.127, §93.128 | Document all projects in the TIP/RTP that are exempt from conformity requirements or exempt from the regional emissions analysis. Indicate the reason for the exemption (Table 2, Table 3, traffic signal synchronization) and that the interagency consultation process found these projects to have no potentially adverse emissions impacts. | Appendix B Exempt Project Listing Ch. 2 pages 28-29 Ch. 5 pages 46-47 | |

ⁱ Note that some areas are required to complete both Interim emissions tests.

ⁱⁱ 40 CFR 93.122(b) refers only to serious, severe and extreme ozone areas and serious CO areas above 200,000 population. Also note these procedures apply in any areas where the use of these procedures has been the previous practice of the MPO (40 CFR 93.122(d)).

Disclaimers

This checklist is intended solely as an informational guideline to be used in reviewing Transportation Plans and Transportation Improvement Programs for adequacy of their conformity documentation. It is in no way intended to replace or supersede the Transportation Conformity regulations of 40 CFR Parts 51 and 93, the Statewide and Metropolitan Planning Regulations of 23 CFR Part 450 or any other EPA, FHWA or FTA guidance pertaining to transportation conformity or statewide and metropolitan planning. This checklist is not intended for use in documenting transportation conformity for individual transportation projects in nonattainment or maintenance areas. 40 CFR Parts 51 and 93 contain additional criteria for project-level conformity determinations.

| Clovis, City of | LSTMP773 | N/A | Interconnect the traffic signal at the Van Ness Blvd/Shields Avenue intersection with preemption, Install a queue cutter for WB traffic, Install Std 8's in both off-quadrants, detectable warning, reconstruct medians | Safety - Railroad/hwy crossing warning devices. | \$4,000 | 1.08 |
| Fresno, City of | LSTMP829 | Various | Chestnut Ave neighborhood, area bound by Chestnut Ave, Tulare St, Willow Ave, and Belmont Ave; sidewalk gap infill and curb ramp replacement (Toll Credits PE/ROW) | From: Various To: Various Dist: N/A | \$3,405 | 3.02 |
| Sanger, City of | LSTMP887 | Various | Bike Lane Improvements at Various Locations: Academy Avenue from California Ave to 850 South of North Ave, Jensen Ave from Indianola Avenue to Academy Avenue; and Greenwood Avenue from California Avenue to North Avenue. | From: Various To: Various Dist: 5.75 | \$209 | 3.02 |
| Selma, City of | LSTMP892 | Various | Rose and Mitchell Avenues: Bike Improvements at various locations. | From: Various To: Various Dist: N/A | \$45 | 3.02 |
| Fresno County | LSTMP864 | Various location | Calwa Sidewalk Project-Pedestrian Improvements throughout the community of Calwa. Building and repairing sidewalks allowing students to travel between school and home. Various locations between locations in Calwa from Orange/9th to Church/Jensen | From: Orange/9th To: Church/Jensen Dist: N/A | \$3,429 | 3.02 |
| Clovis, City of | LSTMP817 | Willow Ave | Willow Ave from Shaw Ave to Barstow Ave; Road rehabilitation including grinding, paving, concrete, installing traffic devices, and restriping | From: Shaw Ave To: Barstow Ave Dist: N/A | \$942 | 1.1 |
| Sanger, City of | LSTMP818 | Almond Ave | Almond Ave from Bethel Ave to Greenwood Ave; pavement reconstruction, replacement of damaged curb and gutter, reconstruction of non-compliant accessible curb ramps, construction of new sidewalk on northside of roadway where none exists. | From: Bethel Ave To: Greenwood Ave Dist: 0.5 | \$814 | 1.1 |
| Caltrans | LSTMP845 | Various | In Fresno County, on Routes 180, 5, 33, 41, 63, 168, 198, 245, and 269 at various locations. Rehabilitate drainage systems. | From: Various To: Various Dist: N/A | \$17,725 | 1.1 |
| Caltrans | LSTMP868 | Various | In the City of Mendota, on Route 180 at postmile 23.55/24.6. Modify and install Americans with Disabilities Act (ADA) curb ramps, pedestrian path, and minor sidewalk in the City of Mendota. Postmiles 23.55/24.6 | From: N/A To: N/A Dist: N/A | \$1,450 | 1.1 |
| Fowler, City of | LSTMP874 | Adams Ave | Fremont Elementary/Marshall Elementary/Fowler High School Pedestrian Improvements. Adams Ave between 7th Street and Temperance Avenue | From: 7th Street To: Temperance Ave Dist: N/A | \$600 | 3.02 |
| Huron, City of | LSTMP875 | Lassen Ave | Construct 7,880 feet of sidewalk, curb, and gutter; spot repair 12 sections of tree-damaged sidewalk. | From: palmer ave To: tomado ave Dist: N/A | \$1,741 | 3.02 |
| Fresno, City of | LSTMP876 | Various | Install 3 HAWK beacons. HAWKS: Abby Street/Clay Avenue, Abby Street/Harvey Avenue, and Blackstone Avenue/Illinois Avenue; educational programming at Ted C. Wills and Dickey Youth Center. | From: Various To: Various Dist: N/A | \$1,636 | 3.02 |
| Parlier, City of | LSTMP877 | Various | Construct Class IV bikeways, curb ramps, bulb-outs, sidewalk and crosswalk improvements, landscaping, and shade trees. This project will be along Madsen Ave from Tuolumne St to Parlier Ave, and along Parlier Ave from Whitner Ave to Avila Street. | From: Various To: Various Dist: N/A | \$3,008 | 3.02 |

| | | | | | | |
|--------------------|-----------|---------------|---|---|----------|------|
| Parlier, City of | LSTMP878 | Various | Construct new bulb-outs, new ADA curb ramps; construct enhanced safety crosswalk features at various locations along Parlier Ave, Third St, Fig Ave, and H St. | From: Various To: Various Dist: N/A | \$3,000 | 3.02 |
| Coalinga, City of | LSTMP879 | SR 198 | Installation of Class I trail, sidewalk, curb ramps, bike/ped bridge, roundabout, and shade trees. Gregory Way (at East Phelps Avenue) to the Segment 3 tie-in at Walnut Avenue/Acabedo Lane. | From: Lucille Ave To: Pacific St Dist: N/A | \$2,016 | 3.02 |
| Fresno County | LSTMP880 | Grantland Ave | Relocate existing crosswalk near Herndon-Barstow Elementary School, Install HAWK system at the new crosswalk, and construct sidewalk with curb & gutter and ADA curb ramps. | From: bullard ave To: tenaya ave Dist: N/A | \$801 | 3.02 |
| Selma, City of | LSTMP881 | N/A | Construct approx. 0.6 miles of Class I bicycle and pedestrian parkway with lighting, landscaping, and shade trees. Construct high-visibility crosswalk with bulb-outs. | From: Valley View Street To: Thompson Ave Dist: N/A | \$3,500 | 3.02 |
| Fresno County | FRE230012 | E Fantz Ave | Easton within the bounding streets of E Fantz Ave. in the north, W Morton Ave. to the south, S Fig Ave. to the west, and S Lily Ave. to the east. Sidewalk replacement including non-ADA compliant ramps, Curb and gutter replacement, completed as necessary to reestablish the drainage pattern to existing inlets, Road widening to proposed curb and gutters, Drainage work, which will vary from surface flow to underground pipe, and potential construction of a ponding basin, depending on the condition of each flood area and existing facilities, Water valves and sewer manholes adjustment, as necessary. | From: Fig To: Lily Dist: N/A | \$4,812 | 3.02 |
| Mendota, City of | FRE230013 | Various | CPFCDS – Rehabilitation and reconstruction of local roads in the City of Mendota. Projects are consistent with Title 23 | From: Various To: Various Dist: N/A | \$6,648 | 1.1 |
| Fresno, City of | FRE250001 | Clinton Ave | Clinton: 500' W of Valentine to Marks; 3LU to 4LU, sidewalks, Class II bike lanes with MMA, curb, gutter, curb ramps, streetlights, culvert extension & relocate utilities | From: Valentine To: Marks Dist: .60 | \$5,967 | 3.02 |
| Kingsburg, City of | FRE250002 | 18th Avenue | 18th Ave Reconstruction – Earl to Sierra; Reconstruction of pavement and pedestrian facilities | From: Earl Street To: Sierra | \$386 | 1.1 |
| Caltrans | FRE250005 | 5 | Near Kettleman City, from King County line to 0.8 mile north of Gale Undercrossing. Rehabilitate pavement and drainage systems, construct rumble strips, upgrade guardrail, signs, lighting, and Traffic Management System (TMS) elements. | From: N/A To: N/A Dist: N/A | \$71,526 | 1.1 |
| Caltrans | FRE250006 | 5 | Near Kettleman City, from 0.8 mile north of Gale Undercrossing to Tuolumne Avenue Overcrossing. Rehabilitate pavement and drainage systems, construct rumble strips, upgrade guardrail, signs, lighting, and Traffic Management System (TMS) elements. | From: N/A To: N/A Dist: N/A | \$57,701 | 1.1 |
| Mendota, City of | LSTMP604 | Various | Rehabilitate 5th Street from Quince to Derrick and Quince Street from 5th St to 6th St including upgrades to curb ramps and alley approaches. | From: Various To: Various Dist: 0.3 | \$1,344 | 1.1 |

| | | | | 2024 Conformity Analysis for 2023 FTIP and 2022 RTP Amendment #3 (as of 04/2024) | Conformity Analysis for 2025 FTIP and 2022 RTP Amendment #4 (as of 05/2024) |
| FR-TCM3 | Fresno COG | Voluntary Rideshare Program and Employer Incentive Program | Operate Transportation Demand Management Program | Fresno COG will continue to implement this program. Funding is included in the 2020-21 Overall Work Program. | Fresno COG will continue to implement this program. Funding is included in the 2023-24 Overall Work Program. |
| FR1.1 | Clovis / Clovis Transit | Regional Express Bus Program | Review and evaluate travel. Improve and expand system with purchase of new vehicles. Continue to evaluate possible express routes where feasible. | Staff continues to evaluate regional transit services. No need yet identified. | Staff continues to evaluate regional transit services. No need yet identified. |
| FR1.2 | Clovis / Clovis Transit | Transit Access to Airports | Provide access to Fresno Yosemite International Airport. | Clovis "Stageline" services continues to coordinate with Fresno Area Express (FAX) to provide regular route service to the airport. Access to and from Fresno Yosemite International Airport is provided by Clovis "Roundup" which provides curb to curb service for senior and disabled residents from their homes. | Clovis "Stageline" services continues to coordinate with Fresno Area Express (FAX) to provide regular route service to the airport. Access to and from Fresno Yosemite International Airport is provided by Clovis "Roundup" which provides curb to curb service for senior and disabled residents from their homes. |
| FR5.9 | Clovis / Clovis Transit | Bus Pullouts in Curbs for Passenger Loading | Provide bus pullouts as appropriate with new capital improvement or development. | Bus pullouts are included in new construction. | Bus pullouts are included in new construction. |
| FR10.2 | Clovis / Clovis Transit | Bike Racks on Buses | Include bike racks with new vehicle purchases. | All new fixed route buses are purchased with a bicycle rack on the front of the vehicle. | All new fixed route buses are purchased with a bicycle rack on the front of the vehicle. |
| FR10.7 | Clovis / Clovis Transit | Require inclusion of bicycle lanes on state or federally funded thoroughfare projects. | Locate bicycle lanes on state or federally funded highway projects. | The city of Clovis has designed and constructed bicycles lanes on State and Federally funded projects where right-of-way and funding allowed. Clovis will continue to install bicycle facilities with all new development as appropriate. | The city of Clovis has designed and constructed bicycles lanes on State and Federally funded projects where right-of-way and funding allowed. Clovis will continue to install bicycle facilities with all new development as appropriate. |
| FR19.5 | Clovis / Clovis Transit | Transit Stop Improvements | Provide transit stop improvements, including benches, shelters, and lighting. | Ongoing. Damaged benches have been replaced or repaired. Improvements to bus stops and bus shelters will continue, particularly if routes are expanded. | Ongoing. Damaged benches have been replaced or repaired. Improvements to bus stops and bus shelters will continue, particularly if routes are expanded. |
| FR5.4 | Coalinga | Site-Specific Transportation Control Measures | Intersection improvements through review of proposed developments. | The City of Coalinga continues to review the need for this measure at appropriate locations, but has not identified a specific need at this time. | The City of Coalinga continues to review the need for this measure at appropriate locations, but has not identified a specific need at this time. |
| FR9.2 | Coalinga | Encouragement of Pedestrian Travel | Promotion of pedestrian travel. Expend sidewalks and crosswalks. | All projects in TID table are completed. Private developments are required to install sidewalks as part of the planning and building approval process (Zoning Ordinance). | All projects in TID table are completed. Private developments are required to install sidewalks as part of the planning and building approval process (Zoning Ordinance). |
| FR-TCM1 | Firebaugh | Traffic Flow Improvements | Apply for funding to create park and ride lot. | Project complete. | Project complete. |
| FR5.4 | Fowler | Site-Specific Transportation Control Measures | Monitor traffic flows and make improvements as needed. | Vehicular traffic within the City of Fowler does not experience delays associated with geometric or traffic control configurations. Traffic flows are routinely observed and monitored during field excursions within the City. No need yet identified. | Vehicular traffic within the City of Fowler does not experience delays associated with geometric or traffic control configurations. Traffic flows are routinely observed and monitored during field excursions within the City. No need yet identified. |

| | | | | 2024 Conformity Analysis for 2023 FTIP and 2022 RTP Amendment #3 (as of 04/2024) | Conformity Analysis for 2025 FTIP and 2022 RTP Amendment #4 (as of 05/2024) |
| FR-TCM1 | Fowler | Traffic Flow Improvements | Monitor growth and respond appropriately. | Project is progressing, and is updated on the TID Tables. | Project is progressing, and is updated on the TID Tables. |
| FR1.2 | Fresno / Fresno Area Express | Transit Access to Airports | Public transportation to airports. Implementation of this strategy is in effect. | Service to airport is in effect. | Service to airport is in effect. |
| FR5.9 | Fresno / Fresno Area Express | Bus Pullouts in Curbs for Passenger Loading | Provide for bus pullouts. Review the need and evaluate benefits of providing bus pullouts for major projects. | All new street construction and capital improvement projects are constructing far side or mid-block bus bays, as feasible per safety and traffic flow, per City of Fresno Public Works standards. | All new street construction and capital improvement projects are constructing far side or mid-block bus bays, as feasible per safety and traffic flow, per City of Fresno Public Works standards. |
| FR5.16 | Fresno / Fresno Area Express | Adaptive traffic signals and signal timing | Adjust traffic timing and install 470 cameras at various locations. | All new traffic signal projects comply with FHWA and City of Fresno adopted ITS standards. The city continues to use development fees and grant funds to improve system. | All new traffic signal projects comply with FHWA and City of Fresno adopted ITS standards. The city continues to use development fees and grant funds to improve system. |
| FR10.2 | Fresno / Fresno Area Express | Bike Racks on Buses | Promotes placement of bicycle racks on buses. All 108 buses have installed bus racks. | All buses have installed bike racks. New buses include bike racks. | All buses have installed bike racks. New buses include bike racks. |
| FR10.4 | Fresno / Fresno Area Express | Development of Bicycle Travel Facilities | Accommodate bicycle lanes with new or substantially expanded major street right-of-ways at the time of development. | New development will continue to construct on-street bike lanes. The City of Fresno has installed several miles of bike lanes in each of the recent FTIP cycles using CMAQ funds in the existing urbanized area. | New development will continue to construct on-street bike lanes. The City of Fresno has installed several miles of bike lanes in each of the recent FTIP cycles using CMAQ funds in the existing urbanized area. |
| FR10.5 | Fresno / Fresno Area Express | Expedite Bicycle Projects from RTP | Build out bicycle projects at an accelerated rate. | The City of Fresno has installed several miles of bike lanes in each of the recent FTIP cycles using CMAQ funds in the existing urbanized area. New development will continue to construct on-street bike lanes. | The City of Fresno has installed several miles of bike lanes in each of the recent FTIP cycles using CMAQ funds in the existing urbanized area. New development will continue to construct on-street bike lanes. |
| FR10.7 | Fresno / Fresno Area Express | Require inclusion of bicycle lanes on state or federally funded thoroughfare projects. | Provide adequate right-of-way for bike lanes along all major streets to the extent economically and physically feasible, including streets that are improved with Federal or State funds. | New projects require bike lanes on major streets, where feasible. In some instances, physical or other issues may limit the inclusion of bike lanes. | New projects require bike lanes on major streets, where feasible. In some instances, physical or other issues may limit the inclusion of bike lanes. |
| FR15.2 | Fresno / Fresno Area Express | Pedestrian and Bicycle Overpasses Where Safety Dictates | Evaluate the need for pedestrian and bicycle overpasses as the need arises. | Safety evaluation is on-going as development proposals are received and as traffic patterns change. No need yet identified. | Safety evaluation is on-going as development proposals are received and as traffic patterns change. No need yet identified. |

APPENDIX E
PUBLIC MEETING PROCESS DOCUMENTATION

**BEFORE THE
FRESNO COUNCIL OF GOVERNMENTS
RESOLUTION NO. 2024-12**

**RESOLUTION ADOPTING THE FRESNO COUNCIL OF GOVERNMENTS
2025 FTIP, 2022 RTP AMENDMENT No. 4
AND CORRESPONDING CONFORMITY ANALYSIS**

WHEREAS, the Fresno Council of Governments is a Regional Transportation Planning Agency and a Metropolitan Planning Organization, pursuant to State and Federal designation; and

WHEREAS, federal planning regulations require Metropolitan Planning Organizations to prepare and adopt a long range Regional Transportation Plan (RTP) for their region; and

WHEREAS, a 2022 Regional Transportation Plan Amendment No. 4 (2022 RTP Amendment No. 4) has been prepared in full compliance with federal guidance; and

WHEREAS, a 2022 Regional Transportation Plan Amendment No. 4 has been prepared in accordance with state guidelines adopted by the California Transportation Commission; and

WHEREAS, federal planning regulations require that Metropolitan Planning Organizations prepare and adopt a short range Federal Transportation Improvement Program (FTIP) for their region; and

WHEREAS, the 2025 Federal Transportation Improvement Program (2025 FTIP) has been prepared to comply with Federal and State requirements for local projects and through a cooperative process between the Federal Highway Administration (FHWA), the Federal Transit Administration (FTA), the State Department of Transportation (Caltrans), principal elected officials of general purpose local governments and their staffs, and public owner operators of mass transportation services acting through the Fresno Council of Governments forum and general public involvement; and

WHEREAS, the 2025 FTIP program listing is consistent with: 1) the 2022 Regional Transportation Plan Amendment No. 4; 2) the 2022 State Transportation Improvement Program; and 3) the corresponding Conformity Analysis; and

WHEREAS, the 2025 FTIP contains the MPO's certification of the transportation planning process assuring that all federal requirements have been fulfilled; and

WHEREAS, the 2025 FTIP and 2022 RTP Amendment No. 4 meet all applicable transportation planning requirements per 23 CFR Part 450; and

WHEREAS, Fresno Council of Governments has integrated into its metropolitan transportation planning process, directly or by reference, the goals, objectives, performance measures, and targets described in other State transportation plans and transportation processes, as well as any plans developed under 49 U.S.C. Chapter 53 by providers of public transportation, required as part of a performance-based program; and

WHEREAS, projects submitted in the 2025 FTIP and 2022 RTP Amendment No. 4 must be financially constrained and the financial plan affirms that funding is available; and

WHEREAS, the MPO must demonstrate conformity per 40 CFR Part 93 for the RTP and FTIP; and

WHEREAS, the Corresponding Conformity Analysis supports a finding that the 2025 FTIP and 2022 RTP Amendment No. 4 meet the air quality conformity requirements for ozone and particulate matter; and

WHEREAS, the 2025 FTIP and 2022 RTP Amendment No. 4 do not interfere with the timely implementation of the Transportation Control Measures; and

WHEREAS, the 2025 FTIP and 2022 RTP Amendment No. 4 conform to the applicable SIPs; and

WHEREAS, the documents have been widely circulated and reviewed by Fresno Council of Governments advisory committees representing the technical and management staffs of the member agencies; representatives of other governmental agencies, including State and Federal; representatives of special interest groups; representatives of the private business sector; and residents of Fresno County consistent with public participation process adopted by Fresno Council of Governments; and

WHEREAS, a public hearing was conducted on June 12, 2024, to hear and consider comments on the 2025 FTIP, 2022 RTP Amendment No. 4, and corresponding Conformity Analysis;

NOW, THEREFORE, BE IT RESOLVED, that Fresno Council of Governments adopts the 2025 FTIP, 2022 RTP Amendment No. 4, and the corresponding Conformity Analysis.

BE IT FURTHER RESOLVED, that the Fresno Council of Governments finds that 2025 FTIP and 2022 RTP Amendment No. 4 are in conformity with the requirements of the Federal Clean Air Act Amendments and applicable State Implementation Plans for air quality.

THE FOREGOING RESOLUTION was passed and adopted by Fresno Council of Governments this 25th day of July 2024.

APPENDIX F

RESPONSE TO PUBLIC COMMENTS

June 25, 2024

**2025 FTIP, RTP Amendment No. 4, and Corresponding Conformity
Analysis Response to Comments**

Fresno Council of Governments (Fresno COG) conducted a 30-day public review period for the 2025 FTIP Amendment, 2022 RTP Amendment No. 4 and associated Air Quality Conformity Analysis between May 31, 2024, and June 30, 2024, for the 2025 FTIP Amendment. Fresno COG received **four** (4) comments and Fresno COG's responses are listed below:

Comment from Erika Espinosa, Office of Air Quality and Climate Change, Caltrans

Date received: 6/18/2024

Submitted via: Email

Subject: FW: Availability of Fresno Council of Governments Draft 2025 FTIP, Draft 2022 RTP Amendment No. 4, and Draft corresponding Conformity Analysis for Interagency Consultation and Public Review

Comment 1: 93.102 (b)(2)(v) This is also addressed in Chapter 1, page 14. We recommend including this page in the conformity documentation checklist.

Response: The Conformity Checklist was updated to include Chapter 1, page 14 to further document EPA nonattainment or maintenance area and its boundaries.

Comment 2: 93.104 (b,c) Include the final board adoption resolution in the final draft of the Conformity Analysis; Please update the adoption dates in the Executive Summary should it change before the final.

Response: The final board resolution will be presented to the Fresno COG Policy Board for adoption on July 25, 2024. Any changes to the dates will be reflected in the Executive Summary and final board resolution.

Comment 3: 93.106 (a) (2)(ii) We are unable to find the documentation on the pages referenced of the regionally significant additions or modifications to the existing transportation network that are expected to be open to traffic in each analysis year.

Response: Chapter 2, page 29 (Appendix B) has been added to the Conformity Checklist to document the regionally significant additions or modifications to the existing transportation network that are expected to be open to traffic in each analysis year.

Comment 4: 93.106 We are unable to locate documentation the design concept and scope of projects allows adequate model representation to determine intersections with regionally significant facilities, route options, travel times, transit ridership and land use on the pages referenced in the conformity documentation checklist.

Response: Chapter 2, pages 24, 25, 27, and 29 have been documented in the Conformity Checklist to address this comment.
